Human Rights Watch defends the rights of people worldwide. We scrupulously investigate abuses, expose the facts widely, and pressure those with power to respect rights and secure justice. Human Rights Watch is an independent, international organization that works as part of a vibrant movement to uphold human dignity and advance the cause of human rights for all.

Human Rights Watch is an international organization with staff in more than 40 countries, and offices in Amsterdam, Beirut, Berlin, Brussels, Chicago, Geneva, Goma, Johannesburg, London, Los Angeles, Moscow, Nairobi, New York, Paris, San Francisco, Sydney, Tokyo, Toronto, Tunis, Washington DC, and Zurich.

Summary

An increase in school enrolments from 40 to 60 percent is applauded as a success, not recorded as a violation of the right to education of the 40 percent of children who remain excluded from school.

-Katarina Tomasevski, former United Nations special rapporteur on the right to education, 2006

Across the world, more than 120 million children and adolescents are absent from class.

In recent years, many countries have been part of international and regional political drives to ensure that all children have access and complete education in the countries that lag behind the most. Such efforts have had some success, with tens of millions entering primary education, and more girls staying in school and pursuing secondary education, improving gender parity in more countries.

Yet despite these and other advances, warnings sounded by the UN and global policy experts indicate that the global progress in education has “left behind” millions of children and young people. More children and adolescents are at risk of dropping out of school, and many are at school facing unsuitable learning conditions.

Behind this failure stands governments, which bear responsibility for ensuring that no child or young person is without education, and lack of focus—both in implementation and in content—in development agendas on governments’ human rights obligations.

This has resulted in an “education deficit”—a shortfall between the educational reality that children experience around the world and what governments have promised and committed to through human rights treaties. This not only undermines the fundamental human right to education, but has real and dire consequences for global development, and entire generations of children.

The benefits of education to both children and broader society could not be clearer. Education can break generational cycles of poverty by enabling children to gain the life skills and knowledge needed to cope with today’s challenges. Education is strongly linked

to concrete improvements in health and nutrition, improving children's very chances for survival. Education empowers children to be full and active participants in society, able to exercise their rights and engage in civil and political life. Education is also a powerful protection factor: children who are in school are less likely to come into conflict with the law and much less vulnerable to rampant forms of child exploitation, including child labor, trafficking, and recruitment into armed groups and forces.

196 member states have adopted legal obligations towards all children in their territories, and countries that ratify specific international and regional conventions are legally bound to protect the right to education and to follow detailed parameters as to how to do so.

Based on research in over 40 countries, this report looks at the key barriers that threaten the right to education today, and the key ways that governments are failing to deliver on core aspects of their right to education obligations. These include ensuring that primary school education is free and compulsory and that secondary education is progressively free and accessible to all children; reducing costs related to education, such as transport; ensuring that schools are free of discrimination, including based on gender, race, and disability; and ensuring schools are free of violence and sexual abuse. It also looks at the main violations and abuses keeping children out of school, including those that occur in global crises, armed conflict—particularly when education is attacked by armed groups,—and forced displacement.

This report finds that many of the same governments that have signed on to development agendas and form part of global partnerships—including among the 16 champion countries that UN Secretary-General Ban Ki-moon appointed in September 2012 to “lead by example” to promote education globally—are those that are also failing many of their school-aged children.

In the new era of sustainable development, where all countries are expected to implement a universal development agenda, all governments need to be held to account for ongoing human rights abuses affecting a significant part of their young population, as well as a failure to provide adequate or timely protections to which children are entitled under the Convention on the Rights of the Child.

The Education Deficit in Numbers

- Around 124 million children between 6-15 years old have either never started school or have dropped out, compared to 122 million in 2011.
- Children between 12-15 years old who should be in lower secondary education are almost twice as likely to be out of school as primary school-aged children.
- Some 31 million girls worldwide do not attend primary school.
- Some 34 million girls are absent from secondary school.
- An estimated 24 million girls may never enter school.
- Some 29 million children are not in school due to conflict and displacement, including a “lost generation” of Syrian children, 2.1 million of whom do not go to school in Syria, and nearly 1 million who live in neighboring countries as refugees.
- Millions of children embroiled in forgotten emergencies—such as in the Central African Republic, Nigeria, and South Sudan—have had their education decimated or jeopardized. Many are drawn into fighting as soldiers or forced to support armed groups.
- Some populations are particularly disadvantaged, including 93 million children under 14 whom the World Health Organization in 2011 estimated have moderate or severe disabilities—an unknown number of whom are excluded from mainstream education.

Weak government monitoring mechanisms, lack of zero-discrimination policies, lack of accountability for children who drop out of education, and unchecked power wielded by school officials as to who goes to school and who stays out are among the factors contributing to governments’ failures to ensure the right to quality education for children who have traditionally endured discrimination.

Moreover, a global push for universal primary education through development agendas has, in some cases, unintentionally led to less political and financial attention being paid to the right to secondary education, resulting in millions of adolescents being unable to continue their studies. As this report shows, these are children and adolescents who are at high risk of exploitation for child labor, early marriage or teenage pregnancy, as well as girls and young people with disabilities whose chance of receiving secondary education is already limited by systemic and discriminatory barriers.

Ending the Education Deficit

First and foremost, ending the education deficit means ensuring every child has a quality primary and secondary education—without the financial and systemic obstacles many face today—and that relevant governments tackle the numerous violations, abuses, or situations that keep children out of school. This in turn depends on political will to institute strong governance systems, including via the judiciary, to uphold and fulfill the right to education.

It also depends on international actors who set policy globally and engage in education through technical and international cooperation.

Donors, multilateral financial bodies—including the World Bank and the Global Partnership for Education,—and international agencies that help governments to implement ambitious education plans should recall their responsibilities to uphold human rights standards and not compromise on key abuses that leave children out of school. This is particularly the case with international actors working with governments unwilling to provide greater protections to minorities, refugees, or persons who have been made stateless; or in cases where governments do not allocate sufficient resources to underserved areas or particular groups of children, particularly children with disabilities.

The UN should continue to hold all governments to account for violations of the right to education. Globally, any champion country or government representative appointed to lead on global education issues must first abide by international human rights standards for all children in its territories and abroad, in cases where they also play a key role as donors, and be open to scrutiny by its own national civil society, as well as UN bodies reviewing its performance.

Key Recommendations

All governments should:

1. Produce and publish reliable and disaggregated primary and secondary enrollment, attendance, and completion statistics by age, gender, disability at a minimum, as well as ethnicity, religion, language, and other categories, where minorities have been traditionally discriminated against.
2. Ensure national legislation includes protection for the right to education, including secondary education, consistent with international law.
3. Take steps, including through policy and monitoring, to ensure nondiscrimination, and guarantee the reasonable accommodation of children with disabilities.
4. Ensure primary education is free and ensure indirect costs do not become a barrier to access. Promptly investigate cases of children being denied access to school or being expelled from school due to an inability to pay fees or for school supplies, including uniforms.
5. Ensure national legislation protects the compulsory nature of primary education. Adopt mechanisms to monitor the enforcement of compulsory education at a local level, including actions by school officials, parents, or community leaders which could jeopardize children's access to education.
6. Make time-bound plans, including with international assistance, to ensure secondary education is free.
7. Outlaw all forms of corporal punishment in schools and introduce stronger guidelines to stop bullying in schools.
8. Strengthen child protection mechanisms in schools and local communities to ensure any allegations of sexual abuse, corporal punishment, or discrimination against students are promptly investigated, redressed, or prosecuted.
9. Make comprehensive sex education part of the school curriculum, ensure that teachers are trained in its content, and allocate time to teach it.

10. Increase the legal age of marriage to 18 for both men and women and monitor local compliance with this age requirement by judges, local government officials, or traditional leaders who are involved in performing or registering marriages, and enforcement by police of laws criminalizing child marriage.
11. Ensure the provision of education in crises and displacement, and adopt special measures to ensure children can continue to go to school in highly insecure areas, including by reducing the distance to school, offering distance learning programs, and setting up protective spaces for girls and teachers.
12. Endorse the Safe Schools Declaration and implement the Guidelines for Protecting Schools and Universities from Military Use during Armed Conflict.
13. Ratify key treaties, including the United Nations Educational, Scientific and Cultural Organization (UNESCO) Convention Against Discrimination in Education, the Convention on the Rights of Persons with Disabilities, and the International Labour Organization 1973 Minimum Age Convention (No. 138) and 1999 Worst Forms of Child Labor Convention (No. 182).

I. International Human Rights Standards

Right to Education

Education is a basic right enshrined in the United Nations Convention on the Rights of the Child (CRC)—the most widely ratified human rights treaty in history, ratified by all states except the United States—as well as in many other UN and regional treaties.¹ International human rights law makes clear that all children have a right to free, compulsory, primary education, free from discrimination.² State Parties should also ensure different forms of secondary education are available and accessible to every child, and take appropriate measures, such as the progressive introduction of free education³ and offering financial assistance in case of need.⁴

State parties to the International Covenant on Economic, Social and Cultural Rights (ICESCR) must submit an action plan on how they will guarantee free and compulsory primary education to all children within two years of ratifying this treaty.⁵

Right to Access Inclusive, Quality Education

The Convention on the Rights of Persons with Disabilities (CRPD) promotes “the goal of full inclusion”⁶ while at the same time considering “the best interests of the child.”⁷ Children with disabilities should be guaranteed equality in the entire process of their education.⁸

⁵ ICESCR, art. 14.

⁶ Convention on the Rights of Persons with Disabilities (CRPD), art. 24(2) (e).

⁷ CRPD, art. 7(2).

⁸ UN Committee on the Rights of Persons with Disabilities, General Comment No. 2, “Article 9: Accessibility,” CRPD/C/GC/2 (2014) <https://documents-dds-ny.un.org/doc/UNDOC/GEN/G14/033/13/PDF/G1403313.pdf?OpenElement> (accessed May 20, 2016), para. 39.

The Office of the High Commissioner for Human Rights (OHCHR), the United Nations human rights agency, states that:

The right of persons with disabilities to receive education in mainstream schools is included in article 24 (2) (a), which states that no student can be rejected from general education on the basis of disability. As an anti-discrimination measure, the “no-rejection clause” has immediate effect and is reinforced by reasonable accommodation... forbidding the denial of admission into mainstream schools and guaranteeing continuity in education. Impairment based assessment to assign schools should be discontinued The legal framework for education should require every measure possible to avoid exclusion.⁹

International law provides that persons with disabilities should access inclusive education on “an equal basis with others in the communities where they live,” and governments must provide reasonable accommodation of the individual’s requirements, as well as “effective individualized support measures in environments that maximize academic and social development.”¹⁰ The government must ensure that children are not excluded from the education system on the basis of their disability.¹¹

Duty to Ensure Reasonable Accommodation

The CRPD places an onus on governments to ensure that “reasonable accommodation of the individual’s requirements is provided” and that “persons with disabilities receive the support required, within the general education system, to facilitate their effective education.”¹²

The CRPD defines “reasonable accommodation” as any “means necessary and appropriate modification and adjustments not imposing a disproportionate or undue burden, where

⁹ Ibid. p. 9.

¹² CRPD, arts. 24(c) and (d) respectively.

needed in a particular case, to ensure to persons with disabilities the enjoyment or exercise on an equal basis with other of all human rights and fundamental freedoms.”¹³

According to the UN Committee on the Rights of Persons with Disabilities, a government’s duty to provide reasonable accommodation is “enforceable from the moment an individual with an impairment needs it in a given situation ... in order to enjoy her or his rights on an equal basis in a particular context.”¹⁴ In assessing “available resources” to guarantee “reasonable accommodation,” governments should recognize that inclusive education is a necessary investment in education systems and does not have to be costly or involve extensive changes to infrastructure.¹⁵

Quality of Education

According to the UN Committee on the Rights of the Child, “Every child has the right to receive an education of good quality which in turn requires a focus on the quality of the learning environment, of teaching and learning processes and materials, and of learning outputs.”¹⁶

Under the Convention Against Discrimination in Education, states must “ensure that the standards of education are equivalent in all public educational institutions of the same level, and that the conditions relating to the quality of the education provided are also equivalent.”¹⁷

The CRPD includes the right to access quality learning, which focuses and builds children’s abilities, and for children with disabilities to be provided with the level of support and effective individualized measures required to “facilitate their effective education.”¹⁸

Progressive Realization of the Right to Education

Education, an economic, social, and cultural right, entails state obligations of both an immediate and progressive kind. This set of rights is subject to progressive realization, in recognition of the fact that states require sufficient resources and time to respect, protect, and fulfill these rights. However, according to the Committee for Economic, Social and Cultural Rights, steps towards the Covenant's goals must be taken "within a reasonably short time after the Covenant's entry into force" and "such steps should be deliberate, concrete and targeted as clearly as possible towards meeting the obligations." The Committee has also stressed that the Covenant imposes an obligation to "move as expeditiously and effectively as possible towards that goal."¹⁹

The OHCHR provides further clarification: "The treaties impose an immediate obligation to take appropriate steps towards the full realization of economic, social and cultural rights. A lack of resources, or periods of economic crisis, cannot justify inaction, retrogression in implementation or indefinite postponement of measures to implement these rights. States must demonstrate that they are making every effort to improve the enjoyment of economic, social and cultural rights, even when resources are scarce."²⁰

International Cooperation and Assistance

The CRC and ICESCR refer to the need for international assistance and cooperation to support the progressive realization of human rights.²¹

According to the OHCHR, "all Member States of the United Nations and United Nations agencies should respect and observe human rights and fundamental freedoms for all without discrimination in their international cooperation ... They should also respect the human rights obligations that the recipient country has accepted under international as well as national law. They should ensure that their cooperation will not undermine the

II. Global Education Efforts

In September 2015, all United Nations member states agreed to work together to “ensure inclusive and quality education for all and promote lifelong learning” by 2030 as part of the new Sustainable Development Goals (SDGs).²³ This was the latest international initiative aimed at tackling inequality in, and lack of access to, education.

In 2000, education ministers from most of United Nations Educational, Scientific and Cultural Organization (UNESCO)’s member states had gathered in Dakar, Senegal, to adopt the Education for All Framework (EFA) with six comprehensive goals overseen by UNESCO, including goals to reach gender parity in education, and increase youth literacy rates.²⁴ Global leaders gave themselves 15 years to accomplish these fundamental goals.²⁵

That same year, all UN member states signed onto the Millennium Development Goals (MDGs), which aimed, among other things, to ensure all children complete primary education and that an equal number of girls and boys remain in school.²⁶

Five years after that, in 2005, the international community acknowledged the enormous barriers children—including the 100 million out of school—faced receiving an education, including lack of quality education, school fees and related expenses, discrimination, and widespread violence in schools.²⁷ Certain at-risk populations, such as children with disabilities, were not even mentioned in the MDGs, resulting in a lack of targeted efforts and limited or no data on their enrollment or access to education.

²⁷ Human Rights Watch, *Failing Our Children: Barriers to the Right to Education*, September 2005, <https://www.hrw.org/sites/default/files/reports/education0905.pdf>.

In 2010, the initial emphasis on progress in education faltered, as domestic investment and multilateral and bilateral donor funding dedicated to education decreased dramatically as donors reduced their global aid budgets or diverted existing funds to other sectors, dealing a setback to ensuring children receive primary and secondary education.²⁸

In an effort to revitalize global support for education, in 2012 UN Secretary-General Ban Ki-moon launched the UN's Global Education First Initiative and appointed 16 champion countries to help him give a "big push" to the global movement for education by 2015 and beyond.²⁹ He called on world leaders and all involved in education to join the initiative and "fulfil the promise to make quality education available to all children, young people and adults."³⁰

In 2015, in view of the continued dwindling of global aid to education, 21 global leaders, co-convened by the Norwegian Prime Minister and the Presidents of Chile, Indonesia, and Malawi, were appointed to an International Commission on Financing Global Education Opportunity, "to reverse the lack of financing for education around the world."³¹ In 2016, UNESCO's Global Education Monitoring Report warned that if countries were serious about implementing the SDG on education, aid had to increase at least six times to cover the annual financing gap of US\$39 billion.³²

²⁸ Total aid to all levels of education declined by 7% between 2010 and 2011. Aid to basic education fell for the first time since 2002 by 6%. Aid to secondary education declined by 11% from an already low level. Education for All Global Monitoring Report, "Policy Paper 13: Aid reductions threaten education goals," June 2014, <http://unesdoc.unesco.org/images/0022/002280/228057E.pdf> (accessed December 13, 2015).

III. Violations and Barriers Affecting the Right to Education

This serves as a grim reminder that the world has yet to fulfil its original promise to provide every children with a primary education by 2015.

— UNESCO, *Global Education Monitoring Report*, 2015

Millions of children have no access to education, or in some cases, interrupt their education, because of ongoing human rights abuses, and governments' failures to provide adequate protections they are entitled to under the Convention on the Rights of the Child (CRC) or to counter abuses perpetrated by state and non-state actors.

All children have a right to go to school, to have equal access to education at all levels, and to be guaranteed a quality education. While many governments have focused on legislating the right to primary education, the right to secondary education—both lower and higher—remains unprotected and unfulfilled in many countries.³³

Guaranteeing equal access to schools to all children satisfies one basic component of the right to education. However, without a quality education, children may leave schools unmotivated, illiterate, and unprepared for life after education. The United Nations Committee on the Rights of the Child underscores that “the key goal of education is the development of the individual child’s personality, talents and abilities, in recognition of the fact that every child has unique characteristics, interests, abilities, and learning needs.” Governments need to ensure that “no child leaves school without being equipped to face the challenges that he or she can expect to be confronted with in life.”³⁴

To make this happen, governments should put in place mechanisms to ensure education is widely available to all children on an equal and inclusive basis. As Kofi Annan, then-UN Secretary-General said in 2000: “More than buildings are required, however. Schools must

be accessible, have qualified teachers and offer such amenities as textbooks and supplies for the poor.”³⁵

The following sections outline numerous human rights violations and key barriers to children being able to claim their right to education.

³⁵ United Nations, Kofi Annan, Secretary-General of the United Nations, “We the Peoples, The Role of the United Nations in the 21st Century,” 2000, http://www.un.org/en/events/pastevents/pdfs/We_The_Peoples.pdf (accessed February 16, 2016).

The Cost of Going to School

Most [students at] mainstream schools don't have to pay. But for us, we have to pay school fees. Lots of parents who have children with disabilities can't work—we have to take care of them 24 hours. Schools write to ask why we haven't paid but they don't understand our situation. The schools are away from our locations. All the [care dependency] grant is going towards the fees, so there's no money for transport... and our children have equal rights?

—Father of an eight-year-old boy with autism, Johannesburg, October 2014

The Universal Declaration on Human Rights of 1948 includes the right to free education “in the elementary and fundamental stages,” and reinforces the compulsory nature of elementary education.³⁶

Since then, most governments have accepted, through their ratification of various human rights treaties, a legal obligation to ensure primary education is free and compulsory, and to gradually make secondary education free and available to all.³⁷ According to the World Policy Analysis Center, a global social protection research and data initiative, only six countries in the world charge formal tuition fees at primary level, 22 charge fees in lower secondary, and 35 in upper secondary.³⁸

Fees in Primary Schools

While many governments have adopted policy measures to expand free primary education to all children,³⁹ some have not translated their international obligations into national legislation, which binds governments to provide free primary education to all children in

their territories.⁴⁰ The lack of political will to move towards fully “free” education, and to oversee an adequate implementation at the local level, has a very significant impact on children from the poorest families or children who belong to traditionally excluded groups.⁴¹

South Africa’s constitutional protections of the right to basic education have long been used as a progressive model for other constitutions.⁴² Although the government has taken numerous steps to remove financial barriers for the poorest students, primary and secondary education are not automatically free in constitutional obligations or education legislation.⁴³ While the majority of the school population can access “no fee schools” or fee waivers, Human Rights Watch research found that many thousands of children with disabilities who go to public schools are expected to pay significantly high school fees and pay for other conditional expenses which children without disabilities do not pay in public schools. This is a discriminatory practice.⁴⁴

Fees in Secondary Schools

I passed [the exam] to go to secondary school. My mother did not have money to send me to secondary school. She then forced me to get married saying it was improper for me to stay at home.

—Amber T. (pseudonym), 18, married at 15, Kahama, Tanzania, April 2014

Bibi, age 17, married at about age 11. After marrying, she was forced to quit school. Bibi said she returned to live with her parents because her husband physically abused her. A local village council would have to decide whether Bibi will return to her husband's home. March 29, 2015 © 2015 Omi for Human Rights Watch

Governments have an international obligation to make secondary education accessible and available to all children, and to progressively make secondary education free or take measures to fund students requiring financial assistance.⁴⁵ According to UNESCO, a growing number of young adolescents are also out of school, with the global total reaching almost 65 million in 2013. Adolescents of lower secondary school age—ranging from 12 to 16 years—are almost twice as likely to be out of school as primary school-age children, with 1 out of 6 not enrolled.⁴⁶

⁴⁵ ICESCR, art. 13 (2) (b); CRC, art. 28 (1) (b).

⁴⁶ UNESCO Institute for Statistics (UIS) and Global Education Monitoring Report, “A growing number of children and adolescents are out of school as aid fails to meet the mark,” Policy Paper 22/Fact Sheet 31, July 2015, <http://www.uis.unesco.org/Education/Documents/fs-31-out-of-school-children-en.pdf> (accessed March 10, 2016).

Yet, many governments have struggled to expand the availability of secondary education in line with demand from primary school graduates, and have not built enough infrastructure to cater to the increased demand for further levels of education.⁴⁷ In countries like Tanzania or Bangladesh, Human Rights Watch has found that access to secondary education is often limited through national assessments in the form of primary school exams, which filter the number of students passing through to secondary education, and school fees.⁴⁸

Families often incur further financial obligations when their children proceed on to secondary education. Limited availability of secondary schools in rural or remote areas means students may have to pay to travel very long distances on a daily basis or rent rooms or pay for boarding facilities in bigger towns.⁴⁹

Parents may also prevent girls from accessing further levels of education due to costs and safety concerns when provision of education is limited. Human Rights Watch has found a strong correlation between child rights violations, such as the early marriage of girls under the age of 18, or the worst forms of child labor, and the expenses associated with secondary education.⁵⁰

Bangladesh has the highest rate of child marriage of girls under the age of 15 in the world, with 29 percent of girls in Bangladesh married before age 15, according to the United Nations International Children's Emergency Fund (UNICEF).⁵¹ Successive inaction by the central government and complicity by local officials allows child marriage, including of very young girls, to continue unchecked, while Bangladesh's high vulnerability to natural disasters puts more girls at risk as their families are pushed into the poverty that helps drive decisions to have girls married. Additionally, despite the government's pledge to end child marriage by 2041, Bangladesh's Prime Minister attempted to lower the age of marriage for girls from 18 to 16 years old.⁵²

Many girls interviewed by Human Rights Watch dropped out of secondary school because of fees and associated expenses and married at a young age. The government's nationwide female stipend program for primary and secondary education to further girls' education has resulted in the gross enrollment rate of girls at secondary level rising to 53 percent. However, even the smallest associated costs in secondary education, including exam fees and private coaching, mean children from many of the poor families cannot attend school and are vulnerable to early marriage.⁵³

Khadija, 35, has 4 children, and decided to take her 13-year-old daughter out of school: "I can't pay so she will have to quit." Her family lives in two rooms and survives through Khadija's husband doing agricultural work and any other work they can find. "She studied until class five, but now she needs to go to high school. The high school charges 2,500 taka [\$32] in registration fees. I would also have to pay for private tutoring and books."⁵⁴

Indirect Costs and Expenses

There are a lot of parents who would send their children to school if it weren't for these costs...there are a lot of people who can't even afford a 10 taka [\$0.13] exam fee.

-Nongovernmental organization worker in Laxmipur, Bangladesh, October 2014

⁵⁴ Human Rights Watch, *Marry Before Your House is Swept Away: Child Marriage in Bangladesh*, p. 50.

The removal of formal school fees significantly contributes to opening the school doors to the majority of children. However, the associated costs of education in primary and secondary schools result in direct financial barriers—such as transport costs and payments for books, uniforms, stationery and equipment, exam fees or parent teacher association fees, and personal assistants (for children with disabilities).⁵⁵ Indirect costs and expenses tend to be much higher than school fees, and “constitute disincentives to the enjoyment of the right and may jeopardize its realization.”⁵⁶

Although the impact of these additional financial barriers are often blamed on poverty, governments have to fulfill an “unequivocal requirement” to ensure education is “free of charge” and to take measures to eliminate financial barriers.⁵⁷ Such measures should begin at the school level, where school officials and teachers collect additional fees and in many cases, punish or stop children from attending school who have not paid additional charges.

In Bangladesh, Morocco, and Tanzania, Human Rights Watch found that some indirect costs exclude poor children as a result of questionable practices by teachers. Abuses where teachers do not teach students compulsory subjects during class hours, but instead charge students and their families to teach these classes outside of school, remains widespread and impacts on children’s equal access to the same standard of education.⁵⁸

I couldn't continue school so I decided to get work. [My last year of school was] the first semester of the first year of junior high. I really wanted to continue studying, but I really didn't have the money. [The school fee] was 15,000 rupiah [\$1.50] per month. But what I really couldn't afford was the 'building fee' and the uniform. It was 500,000 rupiah [\$50] for the building fee and uniform.... Then each semester we had to buy books.⁵⁹

In the Democratic Republic of Congo, Human Rights Watch found that many children living and begging on the streets may be driven by their parents' or guardians' inability to pay school fees and other related costs of primary education. For example, Peter, in Lubumbashi, told us:

I had to leave school after I finished the third grade. My parents could no longer afford the fees, so I started coming to the streets to look for something to do. Life here on the streets is hard, there is never enough to eat, and I am hungry. I would like to return to school and continue my studies.⁶⁰

These additional—and often unofficial but obligatory—expenses lead to inconsistent attendance of children and eventual drop-outs, particularly of girls and children with disabilities, and particularly impact on secondary school-going students who often pay higher fees and expenses.⁶¹ In many cases, they become disincentives for poorer families who are no longer able to pay for their children's expenses.

Parents or guardians may consider forcing children into harmful labor practices or early marriage to offset the costs of their education.⁶² In Nepal, Ram Kumari Chaudhary, 16,

studied to class six and married at age 14. She told Human Rights Watch: “My father stopped my schooling because he could not afford my fees, stationery, and uniform.”⁶³

Recommendations

1. Governments should ensure that all children enjoy their right to free primary education, and progressively expand access to free secondary education by adopting national legislation and time-bound plans to ultimately remove fees.

⁶³ Forthcoming Human Rights Watch report on child marriage in Nepal.

2. Governments should reduce or eliminate costs to students and parents for textbooks, education materials, compulsory exam fees, and uniforms, where these act as significant financial barriers and where they impact on access and retention of particular groups of children.
3. Governments should expand access to financial measures for poorest students or students with demonstrated financial needs, including by providing school transportation or free school meals to attract poor children to school.
4. Governments should promptly investigate cases of children being denied access to school or being expelled from school due to an inability to pay fees or for school supplies, including uniforms.
5. Governments should ensure that appropriate enforcement authorities sanction schools and school officials that illegally levy school fees or turn away students.
6. International and multilateral donors, including the Global Partnership for Education, should consider increasing funding for states to pay for gaps in provision of secondary education.

Discrimination in Schools

The teacher tells us to sit on the other side. If we sit with the others, she scolds us and asks us to sit separately... The teacher doesn't sit with us because she says 'we're dirty.' The other children also call us dirty everyday so sometimes we get angry and hit them.

—Pankaj (pseudonym), a child belonging to the Ghasiya tribal community, Uttar Pradesh, India, April 2013

Me and my cousin are the only two Syrians in the class. The rest of the students have 'ganged up' on us and are saying we speak a lot, that we misbehave. The teacher sent us to the back of the class. All teachers treat me badly because I'm Syrian. When one of the teachers asks a Jordanian girl and she answers the question then the teacher says 'Bravo!' When I answer, I get nothing. Once, going up the stairs with a Jordanian girl, I was told off and asked to go back to the line and wait until everybody went off.

—Mariam (pseudonym), 11, Al-Zarqa, Jordan, October 2015

Globally branded as children who have been “left behind”⁶⁴ or “the hardest to reach,”⁶⁵ many children have been consistently denied an education because of pervasive discriminatory beliefs or practices. On every continent, children suffer direct and indirect discrimination based on their gender, race, ethnicity, disability, religion, health status, or sexual orientation—or a combination of all—on a daily basis.⁶⁶ Many of these children first face the harsh realities of the outside world when they reach school where looking, acting, or feeling different often means ridicule, harassment, and at times, abuse at the hands of classmates, teachers, and others in schools.

According to the Committee on Economic, Social and Cultural Rights—an independent body of experts overseeing the human rights treaty applicable to this set of rights, including education—discrimination constitutes “any distinction, exclusion, restriction or preference or other differential treatment that is directly or indirectly based on the prohibited grounds of discrimination and which has the intention or effect of nullifying or impairing the recognition, enjoyment or exercise [of rights] on an equal footing.”⁶⁷

UNESCO’s Convention against Discrimination in Education—ratified by over 100 countries—also provides strong obligations on governments to eliminate any form of discrimination, whether in law, policy, or practice, which could affect the realization of the right to education. Under the Convention, states must “ensure that the standards of education are equivalent in all public educational institutions of the same level, and that the conditions relating to the quality of the education provided are also equivalent.”⁶⁸

In addition to removing any forms of direct discrimination against students, governments should also ensure indirect discrimination does not occur as a result of laws, policies, or

practices which may have the effect of disproportionately impacting on the right to education of children who require further accommodation, or whose circumstances may not be the same as those of the majority school population.⁶⁹ This is particularly the case with children with disabilities globally, or children belonging to minorities, such as the Roma, who may be placed in segregated or specialized schools in countries like the Czech

⁶⁹ Committee on Economic Social and Cultural Rights, General Comment No. 20, “Non-discrimination in economic, social and cultural rights,” para. 10 (b).

Republic of Bosnia and Herzegovina, or many Kurdish children who are blocked from learning in their mother tongue in Turkey.⁷⁰

Despite the numerous specific commitments to ensure that boys and girls have an equal right to education, adopted or endorsed by governments through special global initiatives, girls continue to face unique gender-specific barriers.⁷¹ These will be outlined in a separate section.

Children Belonging to Ethnic, Religious or Language Minorities

The lack of acknowledgment of or dedicated action to remove direct or indirect forms of discrimination experienced by particular groups of children from minority groups continues to affect access to education for millions of children.

Some government continue to enforce discriminatory policies within their education systems.⁷² These policies often relate to the prohibition of ethnic or cultural practices or languages, or may lead to the separation of children into different education systems, according to their ethnicity, race, or belief.

In a number of cases, persistent discrimination in schools—by school officials or teachers—may lead to drop-outs or lower school performance. In Nepal, for example, Human Rights Watch found that teachers adhere to social or cultural traditions which perpetuate discrimination in classrooms. Sunita married a classmate of a different caste at

the age of 15. They decided to elope prompted by the harassment they faced in school. “The teachers would call me out of class and say, ‘He’s lower caste—you shouldn’t talk with him or be seen with him,’” Sunita said. “They used to beat me with sticks and pull me out of morning assembly and beat me in front of my friends. They said, ‘We’re doing it for her own good because she’s going around with a lower class boy.’”⁷³

In 2001, Human Rights Watch found that in Israel, Palestinian Arab and Bedouin children, as well as Palestinian children in East Jerusalem, faced discriminatory access to quality education relative to Jewish Israeli children.⁷⁴ Even today, schools predominantly catering to Palestinian Arab and Bedouin children receive less funding, and are often overcrowded, understaffed, and sometimes unavailable.⁷⁵ Palestinian children in East Jerusalem suffer through grave shortage of classrooms and adequate school infrastructure, and are subjected to security barriers and checkpoints. In 2011, Israel’s Supreme Court ruled that a shortage of quality constituted a violation of the constitutional right to education for students in East Jerusalem.⁷⁶

In India, the government adopted the Right of Children to Free and Compulsory Education Act in 2009.⁷⁷ The Act guarantees free and compulsory education to all children aged 6 to 14, and makes it mandatory for government schools to provide free books and uniforms in government schools,

while private schools are required to provide at least 25 percent free seats for those from weaker sections and disadvantaged groups.⁷⁸

However, discrimination against children from economically and socially marginalized communities, such as the so-called lower castes, tribal groups, and Muslims, by school authorities plays a significant part in children's irregular attendance and low retention rates. Human Rights Watch research shows how teachers ask Dalit (formerly known as "untouchables") children to sit separately in classrooms, or to wait for their free school lunches only after all the other students have had theirs. Teachers often continue to make insulting remarks about Muslim and tribal students,⁷⁹ and Human Rights Watch found that village authorities would make efforts to encourage parents to send their girls to school when they were kept away by their families.⁸⁰

Children with Disabilities

We tried to put him in a [mainstream] school but they said they couldn't put him in that school because he has disabilities. The school said that he was naughty. Because of Down syndrome he isn't like other children so they [said they] can't teach him.

—Thandi, mother of an 8-year-old boy with Down Syndrome, South Africa, November 2014

Subjects such as physics and chemistry were missing. When we asked to study more things, the staff members cited our diagnosis: profound mental retardation. We were not thinking about our diagnosis. We just wanted to learn something new.

In many countries, children with disabilities continue to be discriminated against and “disproportionately” denied their right to education compared with children without disabilities.⁸¹

Human Rights Watch research indicates that many governments continue to have a strong focus on specialized, separate education for children with disabilities, with limited meaningful inclusion in mainstream schools. This has often led to significant tension on what type of education is best for children with very different types of disabilities.

Inclusive education focuses on promoting accessibility, identifying and removing barriers to learning, and changing practices and attitudes in mainstream schools to accommodate the diverse learning needs of individual students. Despite a global push to ensure schools are “universally designed”—or conform to inclusive standards of building which take into account mobility, access, and other requirements—classrooms, toilets, and school buildings remain inaccessible for children with disabilities.⁸²

Rather than investing in more effective and cost-efficient changes to promote inclusive education in existing schools, Human Rights Watch has found that governments seeking to increase enrollment rates for children with disabilities focus on building costly special schools which cater to smaller numbers of children with disabilities, often grouping children by types of disabilities.⁸³ In Lebanon, for example, where there is limited inclusion of children with disabilities in education and many remain out of school, the government announced plans to build 60 new specialized schools for children with learning disabilities in 2016.⁸⁴

A young boy sitting on the floor of a daycare center, playing with a camera. Suraj, a 9-year-old boy with a physical disability, does not attend school because his parents thought that no school would admit him. He recently started attending a nearby daycare center for children with intellectual disabilities. Our research found that Nepal and its international partners are not doing enough to ensure that children with disabilities are attending school and that the education system is inclusive, accessible, appropriate, and of good quality for children with disabilities. © 2011 Shantha Rau Barriga for Human Rights Watch

Moreover, governments do not always implement “reasonable accommodation”—a key legal requirement under the CRPD to ensure schools accommodate children’s needs and do not discriminate against them—in ways that facilitate children’s accessibility or inclusion.⁸⁵ The burden is often on children and families to adapt to whatever service or

⁸⁵ CRPD, art. 2.

type of education is available, or to drop out of school where schools do not provide additional services.⁸⁶

In Nepal, children with disabilities represent a substantial group of the primary school-aged children who remain out of school. An estimated 85 percent of all out-of-school children in Nepal have disabilities.⁸⁷ The Nepalese government has adopted an inclusive education policy, but it has not done enough to ensure that children with disabilities attend school. The enrollment of children with disabilities in primary and secondary education continued to decline in 2014, despite government efforts which increased school scholarships for children with disabilities, developed a special curriculum for children with intellectual disabilities, and established a team tasked with developing a new national inclusive education policy.⁸⁸

According to the Office of the High Commissioner for Human Rights (OHCHR), “Inclusive education systems are designed to provide for a diverse constituency of students.” In dealing with specific individual needs of students, “an inclusive system would respond by reviewing its practice to determine whether the gaps might be addressed systemically or through a reasonable accommodation measure. A reasonable accommodation fund should be set up to address the gaps.”⁸⁹

Even when children with disabilities are in school, their education is often of poor quality. In China, Nepal, India, Russia, and South Africa, Human Rights Watch found that children with disabilities are affected by their teachers’ lack of knowledge, training, skills and motivation; and an absence of individualized planning and learning.⁹⁰ In many cases, children with disabilities felt their teachers paid limited attention to their educational

Institutionalization of Children with Disabilities

In Greece, India, Russia, Japan, and Serbia, among many other countries,⁹³ the harmful practice of institutionalizing children with disabilities continues, further isolating children from their communities, exposing them to violence and abuse in closed institutions, and depriving them of their right to education.⁹⁴ The lack of education programs in state institutions also severely impacts the ability of children and young adults with disabilities to study in schools and proceed to universities or technical or vocational colleges, and to feel included in their communities when leaving these institutions.⁹⁵

In India, the involuntary admission and arbitrary detention of girls and women with psychosocial or intellectual disabilities in mental hospitals and residential care institutions significantly limits their right to education, despite national legislation which protects the right to education and makes it compulsory. Girls interviewed by Human Rights Watch were often denied their right to leave the institution to go to school, and those who did attend school often received an inferior education.⁹⁶ According to a representative of a local Child Welfare Committee, girls with disabilities in these institutions, “are not being taught anything. There is no dignity, no engagement. Nothing is being done for their self-esteem.”⁹⁷

Recommendations

1. Governments should remove barriers that prevent children from accessing quality primary education by ensuring they adopt specific, well-resourced plans to guarantee access to schools for children who have been traditionally neglected or excluded from schools, such as children with disabilities and children from ethnic, religious, or language minorities.
2. Governments should ensure national legislation protects the compulsory nature of primary education. Adopt mechanisms to monitor the enforcement of compulsory education at a local level, including actions by school officials, parents, or community leaders which could jeopardize children's access to education.

3. Governments should allocate adequate resources to ensure that underserved populations have equal access to inclusive quality education. This may entail building or strengthening schools closer to children who have limited access to education and allocating additional qualified teachers.
4. Governments should ratify the UNESCO Convention Against Discrimination in Education and the Convention on the Rights of Persons with Disabilities.
5. Governments should adopt legislation or policies and allocate resources to ensure mainstream schools provide reasonable accommodation for children with disabilities, and remove any physical or attitudinal barriers which could discriminate against children with disabilities.
6. Governments should enact and enforce national legislation prohibiting discrimination in education against children because of their race, ethnicity, gender, disability, social, or other status. Protections from discrimination should include mechanisms for victims and their guardians to lodge complaints and receive rapid redress; these mechanisms should be publicly communicated. Such laws should address indirect as well as direct discrimination (when apparently neutral practices actually have a negative impact on members of a particular group) as well as addressing harassment.
7. Governments should ensure that national education budgets respect and guarantee inclusion and are allocated to ensure that all schools are funded on a non-discriminatory basis. Where necessary, governments should allocate additional resources to close existing gaps, including the accessibility and physical condition of school buildings, additional educational facilities, adapted learning materials or equipment, and teacher training.
8. Ministries of Education should develop concrete plans and mechanisms to identify and reach out to populations of children that are underserved by the education system. Such mechanisms could include a special office or unit to focus on effective strategies for ensuring that these groups have equal access to schooling.

Violence and Abuse in Schools

They would beat me when the teacher couldn't see them, and my teacher didn't know so wasn't stopping it. My father visited the school director to complain, and the director said, 'You should stop sending her to school if you're worried about it.' But my dad said I needed to study, so the director then told me not to interact with the other kids. I have no friends. It was difficult.... I didn't enjoy anything about school this year. My teacher tried to

scold the other kids, but they never stopped. They'd chant at me, 'Syrian, Syrian,' curse at me, and make fun of me for being older than them. In Syria, I loved school. I had friends. I loved learning. I miss my school in Syria very much.

—Fatima, 12, Turgutlu, Turkey, June 2015

School-based violence, including bullying, deeply affects children's experience in schools. Violence within or near schools undermines children's ability to learn, puts their physical and psychological wellbeing at risk, and often causes them to drop out of school entirely. According to the UN Girls' Education Initiative, approximately 246 million girls and boys around the world experience school-related violence each year.⁹⁸

The Convention on the Rights of the Child mandates governments to take all appropriate legislative, administrative, social, and educational means to protect children from all forms of physical or mental violence, injury, abuse, or negligence, among others.⁹⁹

In 2014, UN member states committed, "to take all appropriate measures to prevent and protect children, including in school, from any form of violence, including forms of bullying, by promptly responding to such acts, and to provide appropriate support to children affected by and involved in bullying."¹⁰⁰

Sexual Violence and Abuse In and Around Schools

In many countries, sexual abuse and exploitation perpetrated by teachers and school staff, students, or adults providing school services is common.¹⁰¹ Sexual abuse can happen in

school toilets, classrooms, and staffrooms, on the way to and from school, and in teachers' houses.¹⁰²

Adolescent girls may also be exposed to sexual exploitation for grades, which may include mainly transactional encounters such as good reports or good marks in exchange for sexual acts, or sexual relations as payment for school fees or supplies.¹⁰³

In Tanzania, Ana, a 16-year-old girl from Mwanza, who dropped out of secondary school as a result of the sexual harassment she experienced, told us:

One [teacher] tried to convince me to have sex so I didn't want to go [on] to F2 to experience that. The teacher was approaching me during the field [sports] practice ... he would call me outside [the school's premises] when students went for a break. He seduced me and tried to [have sex] with me... I stopped going [to sports]. I did this because I was scared that if I was going to meet him he would take me somewhere else to do things with me. I was creating enemies with the teacher...

I felt bad and [teachers] called to tell me that I wasn't concentrating or studying so [my] performance was not good...I decided to drop out of school and stop wasting my parents' money...Some students knew about the teachers' behavior. Some agreed to have sex with them, others refused.¹⁰⁴

In many countries, a pervasive culture of silence remains in schools, leading to insufficient accountability for perpetrators of sexual assault or violence against students. In South Africa, where Human Rights Watch found that sexual violence was a pervasive practice in many schools across the country, the very low rates of investigation and prosecution of perpetrators of sexual violence against school-going children have contributed to the

¹⁰⁴ Human Rights Watch interview with Ana M. (pseudonym), Mwanza, Tanzania, January 2016.

widespread violation of girls' rights in and around school.¹⁰⁵ In Tanzania, nongovernmental organizations focused on child protection told Human Rights Watch they struggle with justice at the school level, particularly when families of a child survivor of sexual violence often decide to settle for compensation from the family of the perpetrator to avoid stigma against the family.¹⁰⁶

Girls' negative experiences of sexual abuse and ongoing harassment in school will drive them out of school. Yet, too often teachers and school personnel who abuse children remain in schools. The lack of action to suspend, investigate, and remove teachers who abuse school children acts as a barrier for many girls, and indicates the lack of commitment to justice at the school level.¹⁰⁷ Moreover, the absence of child protection mechanisms accessible to children at the school level makes it difficult, if not impossible, for children and their families to seek redress.

Enforcing school safeguards, sensitizing male and female teachers, and creating space for child and adolescent-friendly reporting to relevant school authorities and the police should be strengthened in all countries where children experience ongoing violence and abuse in schools.

Compulsory Pregnancy and Virginitv Testing

When we find a pregnant pupil in school, we call a school board meeting where we agree to expel the pupil.

—Head teacher, secondary school in Tanzania, August 2014

Under the guise of schools' responsibility to monitor the upkeep of moral standards, many adolescent girls are routinely subjected to compulsory pregnancy tests in schools, and in some cases, may be subjected to humiliating, degrading, and unscientific virginitv testing which has been condemned by international organizations, such as the World Health Organization.¹⁰⁸

¹⁰⁵ Human Rights Watch, *Scared at School*, pp. 6 – 8; Human Rights Watch, *“Complicit in Exclusion,”* p. 50.

¹⁰⁶ Based on a forthcoming Human Rights Watch report on barriers to secondary education in Tanzania.

¹⁰⁷ Human Rights Watch, *Scared at School*, p. 6.

¹⁰⁸ Virginitv tests are a violation of human rights, particularly the prohibition against “cruel, inhuman or degrading treatment” and constitutes direct discrimination against women and girls; Human Rights Watch, “UN: WHO Condemns ‘Virginitv Tests,’” December 1, 2014, <https://www.hrw.org/news/2014/12/01/un-who-condemns-virginitv-tests>; Phelim Kine

Jacinta, 15, was excluded from school after authorities found out that she was pregnant. She said her teachers took her to a medical clinic to undergo a pregnancy test. She subsequently gave birth prematurely and her baby did not survive. August 5, 2014. © 2014 Marcus Bleasdale/VII for Human Rights Watch

School officials are allowed to perform such tests on site, including groping students' abdomens, or often identify girls who are 'at risk' of becoming pregnant and refer them to nearby hospitals for urine tests.¹⁰⁹ In schools, mandatory pregnancy testing can contribute to adolescent girls dropping out of school to avoid any humiliation or stigma.¹¹⁰

(Human Rights Watch), "Dispatches: Indonesia 'Virginity Tests' Run Amok," February 2, 2015 <http://www.hrw.org/news/2015/02/09/dispatches-indonesia-virginity-tests-run-amok>.

¹⁰⁹ Human Rights Watch, *No Way Out*, p. 49.

¹¹⁰ Onyema Afulukwe, Center for Reproductive Rights, "RH Reality Check: Forced Pregnancy Testing: Blatant Discrimination and a Gross Violation of Human Rights," August 2012, <http://www.reproductiverights.org/press-room/louisiana-africa-pregnancy-test-teens-girls-schools> (accessed March 6, 2016).

In Tanzania, schools routinely conduct mandatory pregnancy tests and expel pregnant girls. More than 8,000 girls are routinely expelled every year from school because they are pregnant.¹¹¹ Others stop attending school when they find out they are pregnant because they fear expulsion or stigma. Despite the evidence of negative and degrading impact of testing, a 2013 Ministry of Education toolkit recommends conducting periodic pregnancy tests as a way of curbing teenage pregnancies in schools,¹¹² but omits the need to ensure girls have access to comprehensive sexual education. Sharon, who married when she was 14, was expelled when she was in her final year of primary school: “When the head teacher found out that I was pregnant, he called me to his office and told me, ‘You have to leave our school immediately because you are pregnant.’”

In 2015, the government adopted provisions to allow the admission of girls to school after they have given birth. However, the policy does not address the position of married girls explicitly and in 2016, Human Rights Watch found many girls continue to be barred from re-entering education or to deal with many barriers which push them out permanently.¹¹³ The Tanzanian government does not appear to collect data on the numbers of girls who are expelled because they are pregnant or married. School officials told Human Rights Watch that they are only expected to record cases of “truancy.”

Violence and Corporal Punishment

Are teachers good? No! They hit us, even with a hose.

—Abdullah, 11, in 5th grade, Amman, Jordan, October 2015

According to the Global Coalition to End All Corporal Punishment of Children, corporal punishment in schools has not been prohibited in 72 countries.¹¹⁴

The Committee on the Rights of the Child defines ‘corporal’ or ‘physical’ punishment as any punishment in which physical force is used and intended to cause some degree of

pain or discomfort, however light.¹¹⁵ Corporal punishment is degrading and humiliating, damaging the student's self-esteem, erodes students' trust in their teachers, and makes students feel helpless and disengaged in school.¹¹⁶

In the United States, corporal punishment in public schools is routine in many parts of the country, and many school children, particularly children with disabilities, continue to be subjected to often violent and degrading punishment.¹¹⁷ Children with disabilities are disproportionately more at risk of corporal punishment or violence in schools than other children. For hundreds of thousands of school children in the United States, violence inflicted by those in authority is a regular part of their experience at school.

While 31 states and the District of Columbia have now banned corporal punishment, in 19 states it is legal for teachers or principals to punish public school students by hitting them repeatedly.¹¹⁸ Corporal punishment usually takes the form of paddling (also called “swats,” “pops,” or “licks”). A teacher or administrator swings a hard wooden paddle that is typically a foot-and-a-half long against the child's buttocks anywhere between three and ten times.

One student told Human Rights Watch that: “licks would be so loud and hard you could hear it through the walls.” A teacher reported that a principal turned on the loud speaker while paddling a student: “It was on the intercom in every class in the school.... He was trying to send a message ... [l]ike, ‘you could be next.’”¹¹⁹

The American Society for Adolescent Medicine has found that victims of corporal punishment often develop “deteriorating peer relationships, difficulty with concentration,

lowered school achievement, antisocial behavior, intense dislike of authority, somatic complaints, a tendency for school avoidance and school drop-out, and other evidence of negative high-risk adolescent behavior.”¹²⁰

Human Rights Watch has found that students exposed to corporal punishment or physical abuse are more likely to drop out.¹²¹ However, girls and children with disabilities are often more vulnerable and at risk of being abused in schools. In Australia, for example, a school principal resorted to building a metal cage for a 10-year-old child with autism,¹²² while in Nepal and South Africa, Human Rights Watch found that children with intellectual disabilities and autism who could often not communicate were often more vulnerable to harassment, mistreatment, and beatings by teachers and peers.¹²³

Bullying and Harassment of Lesbian, Gay, Bisexual and Transgender Children

It was common knowledge that I was being bullied...it was also common knowledge that my teachers would never help me.

—A 20-year-old Japanese woman who was bullied by her classmates in junior high school,
November 2015

Many lesbian, gay, bisexual, and transgender (LGBT) children and young people around the world are subjected to homophobic or transphobic bullying; gender-specific types of bullying that are based on actual or perceived sexual orientation or gender identity.¹²⁴ These violations are compounded by the failure of many governments to enact laws providing students with protection from discrimination and violence based on their sexual

that schools are overwhelmingly unsafe for LGBT students.¹²⁶

During investigations in Iran, Jamaica, and Japan, Human Rights Watch found that many of the LGBT youth interviewed had experienced bullying in school.¹²⁷ LGBT persons interviewed by Human Rights Watch in Iran indicated that primary school was one of the most traumatic periods in their life. Mani, a 29-year-old gay male from Tehran, said: “In primary school, we realize we are different from our peers, and because of this we become the focus of ridicule. The [kids] call us names like *khaleh zanak* (literally “auntie lady”) because we appear more feminine and because we don’t like to play like other boys. It is from this time that we begin to think that there is in fact something wrong with us.”¹²⁸

In Japan, LGBT youth reported being the victims of homophobic and transphobic bullying, violence, and discrimination by both peers and teachers.¹²⁹ Even in the absence of the criminalization of same-sex behaviour, bullying and discrimination affects the right to education and creates an unsafe learning environment for LGBT students and those who do not conform to gender norms and societal expectations.¹³⁰

Transgender students face legal barriers to accessing education because the country’s legal recognition procedure for transgender people is inaccessible for those under 20, and contains abusive and discriminatory requirements—including coerced sterilization—for those who want to be legally recognized in their gender identity. Japanese transgender students told Human Rights Watch they faced harassment and bullying when their schools forced them to access lavatories according to the gender they were assigned at birth, for example, leading to school drop-outs. Japan’s schools feature deeply-engrained gender separation and stereotypes. Nearly all junior high and high school students are required to wear gender-specific uniforms, and school activities are often gender-segregated.

¹³⁰ Kyle Knight (Human Rights Watch), “Dispatches: UN Takes on LGBT Bullying in Asia,” November 18, 2015, <https://www.hrw.org/news/2015/11/18/dispatches-un-takes-lgbt-bullying-asia>.

For children exploring their gender identity or those who identify as transgender, such an environment can be harsh. “The Japanese school system is really strict with the gender system,” a transgender high school teacher told Human Rights Watch. “It imprints on students where they belong and don’t belong—in later years when gender is firmly tracked, transgender kids really start suffering. They either have to conceal and lie or act like themselves and invite bullying and exclusion.”¹³¹

In the United States, around two thirds of LGBT students are bullied in school and it is estimated that one third of LGBT children skip or drop out of school as a consequence of their negative, unsafe, and discriminatory experiences in school.¹³²

Ursula (pseudonym), 16, a transgender student in higher secondary school, in Alabama, told Human Rights Watch:

They refused to put me in girls’ physical education last year, and I was scared to go in the locker room and dress out and wouldn’t participate, and so I failed. I requested to do girls physical education and it’s been over a month—I don’t think they’re making the decision. And I need a whole year of physical education to graduate. I’m worried about physical bullying and verbal bullying in the locker room, and harassment—I’ve experienced harassment every time I went in there, and finally I just couldn’t do it anymore.¹³³

Lack of Comprehensive Sexuality Education in Schools

I didn't know that I would get pregnant by having sex... I was just playing sex.

—Gloria C., who got pregnant at age 14 or 15, Yambio County, South Sudan, March 2012

In many countries, schools often do not offer comprehensive sexuality education or only offer a limited sex education curriculum when it is already too late for many students. Health workers and teachers do not share complete information about reproductive health with adolescents, and very often information is not available in accessible formats for people with disabilities.

When it is available, sexual and reproductive health education is often not a stand-alone topic, distinct from biology curricula. Paradoxically, in some countries, students only access sexual and reproductive health modules towards the end of lower secondary education, when a significant proportion of girls have already dropped out or become pregnant. Children who are behind in school because of delays related to poverty, disability, or other factors are also less likely to be in the right class at the right time to benefit from sexual and reproductive health modules taught in school.

Children and young adults interviewed by Human Rights Watch referred to the limited, and often incorrect and unscientific, information they receive at school about pregnancy, sexuality, and HIV/AIDs prevention.¹³⁴ In many cases, children and young adults interviewed by Human Rights Watch who had limited or no inclusive access to comprehensive sexual education or contraception had become pregnant without understanding how or had become infected with HIV/AIDS and other sexually transmitted diseases.¹³⁵

The UN Population Fund (UNFPA) states that: “Comprehensive Sexuality Education empowers young people to take control of their own behavior and, in turn, treat others with

respect, acceptance, tolerance, and empathy, regardless of their gender, ethnicity, race, or sexual orientation.”¹³⁶ UNFPA’s Operational Guidance for Comprehensive Sexuality Education also highlights how students can “explore and nurture positive values and attitudes towards their sexual and reproductive health, and develop self-esteem, respect for human rights, and gender equality.”¹³⁷

According to the UN special rapporteur on the right to education, “In order to be comprehensive, sexual education must pay special attention to diversity, since everyone has the right to deal with his or her own sexuality without being discriminated against on grounds of sexual orientation or gender identity.”¹³⁸

The UNESCO International Technical Guidance on Sexuality Education puts the impetus on policymakers and education officials at schools to take a leadership role in promoting sexuality education.¹³⁹

Recommendations

1. Governments should amend national legislation as necessary to abolish the use of all forms of corporal punishment in all schools, public and private, and ensure that such policies are enforced and widely publicized.
2. Governments should take disciplinary and legal action against school officials and teachers who resort to or fail to take reasonable measures to stop all violence against children in schools.
3. Governments should set up and provide resources for child protection mechanisms at the school level, linked to reporting, counselling, and redress mechanisms for children affected by violence or abuse in schools, with particular efforts for children with disabilities.

4. Governments should support programs that educate parents, teachers, and society at large about the harm of corporal punishment and about nonviolent methods of discipline.
5. Governments should enact legislation to protect students from harassment and discrimination on all grounds prohibited in law.
6. Governments should empower girls and boys with information and knowledge of their reproductive and sexual rights by making comprehensive inclusive sexuality education part of the school curriculum, ensuring that teachers are trained in its contents, and allocating adequate time to teach it.
7. Governments should provide training to all teachers, administrators, and other school staff on addressing the needs of lesbian, gay, bisexual, and transgender youth, and how to intervene to stop harassment and violence, and ensure that schools review their nondiscrimination policies to ensure the inclusion of protections based on sexual orientation and gender identity.

Persistent Exclusion of and Violations Against Girls

Short-changing girls is not only a matter of gender discrimination; it is bad economics and bad social policy...Indeed, world leaders at United Nations conferences throughout the 1990s, have acknowledged that poverty cannot be overcome without specific, immediate and sustained attention to girls' education.

—Kofi Annan, former United Nations Secretary-General, 'We the Peoples,' 2000

Traditional biases against girls, the exclusion of girls from school activities, sexual harassment, child marriage, early pregnancy, and violence in and around school, particularly sexual violence, are some of the factors and violations which disproportionately affect girls, including girls with disabilities.¹⁴⁰ At the school level, the lack of concrete gender-specific policies and approaches to transportation, the lack of

¹⁴⁰ Human Rights Watch, Submission for the General Recommendation on Girls'/Women's Right to Education, June 23, 2014, <https://www.hrw.org/news/2014/06/23/human-rights-watch-submission-general-recommendation-girls/womens-right-education>.

separate toilets or sanitation facilities, or the lack of adequate child and gender protection safeguards in schools contribute to higher drop-out rates among girls.¹⁴¹

All 189 governments that are state parties to the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW) must “take all appropriate measures to eliminate discrimination against women in order to ensure them equal rights with men in the field of education.” Additionally, governments must guarantee girls have the same conditions to access studies at all educational levels, to access the same quality of education, as well as further opportunities to access higher levels of education.¹⁴²

Child Marriage and Early Pregnancy

Child marriage ruined my life. Now I do not work and cannot find a job because I stopped going to school.

—Confidence S., 22, married at age 14 to a 42-year-old man, Zimbabwe, November 2015

Many girls leave schools prematurely and end their education when they are forced into early marriages.¹⁴³ International and regional obligations explicitly state that the minimum age of marriage should be 18, and marriages should be entered into with the free and full consent of both spouses.¹⁴⁴

Human Rights Watch has documented the impact of child marriage on the right to education of many girls in countries as diverse as Afghanistan, Bangladesh, Malawi, Nepal, South Sudan, Tanzania, Yemen, and Zimbabwe.¹⁴⁵ Many girls told Human Rights Watch that they found it difficult to return to school after marriage because of

Mariam (pseudonym), 15, from Ghouta, Syria engaged to a Syrian man, aged 20, shows her engagement ring, in Amman, Jordan. She dropped out of 7th grade. In 2011, 12 percent of registered marriages in Syrian refugee communities in Jordan involved a girl under the age of 18. This had increased to 31.7 percent in the first quarter of 2014. © 2015 Elin Martínez/Human Rights Watch

discriminatory school policies, lack of money for school fees, lack of child care, unavailability of flexible school programs or adult classes, lack of early childhood services for their children, and the need to do household chores. Others said that their husbands, own family members, or in-laws would not allow them to continue school after marriage.

In South Sudan, Akur L., who married at the age of 13 in 2003 and dropped out of school, said:

My uncles forced me to marry a man who was old enough to be my grandfather. I was going to school and in class six. I liked school. If I was given a chance to finish school, I would not be having these problems, working as a waitress and having separated from my husband.¹⁴⁶

Adolescent pregnancy outside of marriage, or the fear that adolescent girls will get pregnant or will be exposed to sexual harassment, also helps fuel child marriage.¹⁴⁷ According to the United Nations Population Fund (UNPFA), “Many countries have taken up the cause of preventing adolescent pregnancies, often through actions aimed at changing girls’ behavior. Implicit in such interventions are a belief that the girl is responsible for preventing pregnancy and an assumption that if she does become pregnant, she is at fault.”¹⁴⁸ Many governments enforce policies which automatically exclude pregnant girls from schools and terminate their education.¹⁴⁹

In Zimbabwe, if a girl becomes pregnant, spends the night outside the family home, is seen with a boyfriend, or returns home late after seeing a boyfriend, her family may force her to marry for the sake of honor. In some cases girls who become pregnant or are sexually active decide to enter a customary marriage because they fear being rejected, beaten, or abused by relatives. According to UNICEF, nearly one-third of girls in Zimbabwe marry before their 18th birthday and 4 percent marry before they turn 15.¹⁵⁰

Nearly all the child brides Human Rights Watch interviewed were not able to continue their education after marriage, either because of their financial situation, their husband would not permit it, or they had to care for a baby. Many indigenous apostolic churches forbid girls to continue education after marriage.

Abigail C., 15, told Human Rights Watch:

I fell pregnant last year when I was 14 years old. I had stopped going to school that same year because my mother, who works as a maid earning \$50 per month, could not afford to send me to school. I had an affair with an older man who had a wife. The woman who lives next door is the one who persuaded me to have an affair with this man. I received no sex education at all, and, when I had sex with this man, I fell pregnant. I went to live with his mother because he was staying with his first wife. In June, I went to hospital and gave birth to a baby, who died within a few minutes of birth. The nurses told me my baby died. After that I went back to live with my mother. I wish to go back to school because I am still a child.¹⁵¹

In July 2015, Zimbabwe became the eighth country to join the African Union campaign to end child marriage in Africa. The government has yet to finalize and implement a national action plan on ending child marriage, as the African Union has requested.¹⁵²

In the minority of cases where young mothers of school-going age are allowed to go back to school by school officials, they may face high levels of stigma and negative attitudes in school.¹⁵³ In South Sudan and Tanzania, Human Rights Watch found that girls who had become mothers often had to change schools to prevent being stigmatized by their former peers or teachers. Many dealt with new barriers associated with enrolling in alternative schools which were often further away from their homes. Many girls have to balance the need to combine studying and working to pay for their children's expenses.¹⁵⁴

¹⁵¹ "Zimbabwe: Scourge of Child Marriage, Set 18 as Minimum Age; Adopt National Action Plan," Human Rights Watch news release, November 25, 2015, <https://www.hrw.org/news/2015/11/25/zimbabwe-scourge-child-marriage>.

¹⁵⁴ Human Rights Watch, "*This Old Man Can Feed Us, You Will Marry Him*"; Forthcoming Human Rights Watch report on barriers to the right to secondary education in Tanzania, 2016.

The new UN Sustainable Development Goals, adopted in September 2015, include a goal to eliminate child marriage as a key target by 2030 for advancing gender equality. Meeting this target requires a combination of approaches, including: a commitment of political will and resources over many years; willingness to acknowledge adolescent girls' sexuality and empower them with information and choices; and true coordination across various sectors, including education, health, justice, and economic development.¹⁵⁵

Menstrual Hygiene and Lack of Adequate Sanitation in Schools

When [the girl's] menstrual cycle began, she had blood on the bench. Her friends teased her and the teacher beat her. From the next day, she didn't come again.

—Director of an NGO working with marginalized girls, Nepal, 2011

In Bangladesh, a lack of hygienic materials and private toilets are a factor in girls' absence from school. This becomes more difficult for girls to manage as they reach the onset of menstruation, when they become particularly likely to miss school during menstrual periods. A study found that 40 percent of girls reported missing school during menstruation for an average of three school days each menstrual cycle.¹⁵⁶ In this study, 82 percent of girls said their school facilities were not appropriate for managing menstrual hygiene, 12 percent had access to female-only toilets with water and soap available and only three percent said the toilet they used had a trash bin.¹⁵⁷ Gaps in attendance caused by a lack of sanitation and care for menstrual hygiene also compromise girls' eligibility for government stipends linked to attendance, cause girls to fall behind in their studies, and undermine parental support for keeping girls in school.¹⁵⁸

Girls' right to education can be severely curtailed when schools lack separate, safe, and clean sanitation facilities, or clean water to manage menstruation. Sanitation-related barriers can lead to low attendance and contribute to high dropout rates for girls.

Iruain (Laksam Upazila in Comilla District), Bangladesh. March 6, 2016 © 2016 Atiah Saha/Human Rights Watch

In Nepal, Sunita, age 19, told Human Rights Watch, “The government should build toilets in schools. We had a toilet, but it was not good. If there are proper toilets, girls will feel better when they are on their periods and have to change their pads. Many girls stay home during their periods. They were marked absent and wouldn’t be able to learn. They couldn’t catch up because the course would have moved on. They would try to sit with their friends and catch up, but the teacher wouldn’t repeat [information]. Some of them left school because of this. Some got married then, some did not.”¹⁵⁹

¹⁵⁹ Forthcoming Human Rights Watch report on child marriage in Nepal.

Girls who cannot afford sanitary napkins or who cannot change or dispose of them privately may miss school during their periods.¹⁶⁰ For example, UNICEF estimates that 1 in 10 African girls miss school during menstruation, which contributes to higher school drop-out rates for some girls.¹⁶¹ Human Rights Watch spoke with girls in Haiti who leave school to go home to wash and change the materials they use to manage their menstruation because they cannot do that at school. This caused some to miss as much as 30 minutes of instruction every time they needed to change their materials.¹⁶² Teachers in Haiti also told Human Rights Watch that girls sometimes stay at home during menstruation because they have no option to manage their hygiene at school.¹⁶³

Even if girls do go to school during their periods, they may feel less empowered or focused to participate if they lack sanitary supplies. Female teachers are also affected but may not provide support due to engrained taboos about periods.¹⁶⁴ In Tanzania, adolescent girls told Human Rights Watch they find it challenging to go to school and generally have very little information and no one to talk to about periods, including female teachers.¹⁶⁵

Michaela, who attends Form 4 said: “If you sit for too long, you find that blood appears on your skirt. Boys laugh at you.”¹⁶⁶

Moreover, girls with disabilities face additional challenges. In Nepal, girls with disabilities often drop out of school once they reach puberty because there are no support services in school. Not being able to move, dress, and use the bathroom independently increases their vulnerability to intrusive personal care or abuse. Accessible and inclusive menstrual

¹⁶⁶ Human Rights Watch focus group discussion at a secondary school in Ukerewe, Tanzania, January 2016.

hygiene management and sanitation facilities are therefore particularly important in enabling girls with disabilities to continue their education.¹⁶⁷

Prioritizing the construction or maintenance of adequate, accessible, and separate, locking sanitation facilities, with access to safe drinking water and waste disposal facilities, increasing the availability of hygiene materials in schools (including in different formats such as plain language and Braille), and ensuring schools talk about menstruation to girls and boys, should be a policy priority for more governments.¹⁶⁸

Recommendations

1. Governments and parliaments should increase the legal age of marriage to 18 for both men and women and monitor local compliance with this age requirement by judges, local government officials, or traditional leaders who are involved in performing or registering marriages, and enforcement by police of laws criminalizing child marriage.
2. Governments should increase positive incentives for girls to attend school, including free meals, bicycles or transport subsidies, and stipends for school attendance.
3. Governments should ensure schools have accessible, separate toilet facilities with individual, locking toilets, soap and running water, menstrual hygiene supplies, and disposal facilities, and take other measures to ensure that schools have adequate menstrual hygiene management in place.
4. Governments should add to the compulsory education curriculum lessons on the harmfulness and illegality of child marriage, beginning when students are at an early age.
5. Governments should establish programs in all schools, including training of teachers and school administrators, to raise awareness about the harm and illegality of child marriage, and to monitor the student body for girls at risk of child marriage, and immediately raise concerns about child marriage with parents and, when appropriate, law enforcement.
6. Governments should establish accessible mechanisms for girls to make confidential complaints regarding sexual harassment or violence by other students, teachers, staff, or principals. Ensure the prompt and effective investigation of such complaints, and prompt and appropriate disciplinary action against perpetrators, including counseling, suspension, termination, and prosecution when necessary.

¹⁶⁷ Human Rights Watch, *Futures Stolen*.

¹⁶⁸ UNICEF and Columbia University Mailman School of Public Health, “WASH in Schools Empowers Girls’ Education: Proceedings of the Menstrual Hygiene Management in Schools Virtual Conference 2012, 2012.

7. Governments should end virginity testing and compulsory pregnancy testing, and remove any wider legal or policy justifications for relying on them.
8. Governments should remove any policies which directly or indirectly prohibit girls from going back to school as a result of parenthood or marriage, and monitor school compliance with such policies.
9. Governments should adopt special measures to protect the right to education of young mothers who are of school-going age, and provide catch-up opportunities and access to alternative education programs for girls who have dropped out of school or were excluded from education as a result of their pregnancy.
10. Governments should empower girls and boys with information and knowledge about their reproductive and sexual rights by introducing an age-appropriate and inclusive comprehensive sexuality and reproductive health education curriculum, including in accessible formats for children with different types of disabilities, and ensuring teachers allocate sufficient time to teach it fully.

Education under Attack

In 2015, conflict disrupted the education of millions of children, and according to Leila Zerrougui, the UN secretary general's special representative of the secretary general for children and armed conflict, armed "groups perpetrating extreme violence also particularly targeted children pursuing their right to education."¹⁶⁹

Attacks on Schools

[The army] fired on my school with a tank. It was during science class, but I was on my way to the bathroom. Two shells hit the fourth floor. I was on the first floor. People started running away. When I ran away, a *shabiha* [a state sponsored militia] caught my shoulder, but I struggled and managed to get away. The *shabiha* came into the school and shot the windows, broke the computers. After that, I only went back to take my exams.

—Rami, 12, a refugee from Daraa governorate in Syria, interviewed in Ramtha, Jordan, November 2012

¹⁶⁹ Office of the Special Representative of the Secretary-General for Children and Armed Conflict, "Increasingly Complex and Widening Conflicts Take Huge Toll on Children in 2015," February 15, 2016, <https://childrenandarmedconflict.un.org/press-release/human-rights-council-report-2016/> (accessed April 4, 2016).

In the Democratic Republic of Congo, Human Rights Watch documented attacks on schools, students, and teachers. Children were also forcibly recruited by armed groups in schools or while walking to or from school. Many were then sent to fight on the battlefield with little to no training or served as porters or cooks, and many of the girls were forced to be sex slaves.¹⁷⁰

A local resident told Human Rights Watch: “The first time the M23 [rebels] came to attack, the FARDC [Congolese Armed Forces] had occupied our school.... And when the FARDC had been driven out by the M23, then the M23 also occupied our school.... Our school became the battlefield.”¹⁷¹

Attacks against schools have resulted in the damage and destruction of school buildings, the death of students and teachers in or near school compounds, and the closure of schools.¹⁷² According to the Global Coalition to Protect Education from Attack, since mid-2009, more than 30 countries have experienced a pattern of targeted attacks on schools, teachers, and students, or the military use and occupation of schools by armed forces and armed groups.¹⁷³

Under international humanitarian law, schools and other educational structures are civilian objects that are protected from attack. They may only be attacked if, and only for such time as, they are military objectives—those objects that contribute to the military action and whose destruction at that time would offer a definite military gain. Moreover, attacks on valid military targets—including school buildings being used for military purposes—must be neither indiscriminate nor disproportionate. Intentional attacks on buildings dedicated to education are war crimes, as long as the building is not a military objective.¹⁷⁴

Damaged school in Nikishine Rebel fighters deployed inside the school between September 2014 and February 2015 and exchanged intense fire with Ukrainian forces. © 2015 Yulia Gorbunova/Human Rights Watch

In Ukraine, since 2014, armed groups have shelled schools, destroyed resources, and forced schools to close during the conflict. Even when schools re-opened in an attempt to continue, merging students led to overcrowding, some schools operated on a double-shift system, and the number of teaching hours for children has been reduced.¹⁷⁵

In one school which had a pre-conflict enrollment of 370 students, classes were interrupted several times throughout the conflict, because of the intensity of hostilities. The school's principal said: "In September, October, and November 2014 there were no classes, school was closed. By mid-

¹⁷⁵ Yulia Gorbunova and Bede Sheppard (Human Rights Watch), "The last school bell in Krasnohorivka," commentary, *Kyiv Post*, November 11, 2015, <https://www.hrw.org/news/2015/11/11/last-school-bell-krasnohorivka>.

December, the school re-opened and remained open until winter holidays [New Year's break]. Then there were a few days between January 15 and 19 [when the school was open] and then—active fighting. We had to shut down again. There was no electricity or heating for two months. We had to survive—we survived the best we could.”¹⁷⁶

Military use of schools

In the past decade, armed forces and non-state armed groups, and at times international peacekeeping forces have used schools and other institutions for military purposes, in at least 26 countries with armed conflict in Africa, the Americas, Asia, the Middle East, and Europe.¹⁷⁷

In some cases, armed forces and armed groups have turned schoolgrounds into battlegrounds, taking over educational institutions—kindergartens, daycare centers, schools, and universities—for military purposes.¹⁷⁸ Schools have been used as barracks, logistic bases, headquarters, weapons and ammunition storage caches, detention and interrogation centers, and recruitment grounds in the majority of conflicts in recent years.¹⁷⁹

Students and teachers have been displaced entirely or, in other instances, forced to try to study with armed men present in their school, potentially endangering their lives and safety, as well as their right to education. Even where schools are vacant at the time, the damage to school infrastructure from looting and attacks by opposing forces, as well as, in some instances, the ongoing presence of troops when schools could reopen may prevent children from resuming their education.¹⁸⁰

¹⁷⁶ Human Rights Watch, *Ukraine—Studying Under Fire: Attacks on Schools, Military Use of Schools During the Armed Conflict in Eastern Ukraine*, February 2016, <https://www.hrw.org/report/2016/02/11/studying-under-fire/attacks-schools-military-use-schools-during-armed-conflict#5b2ddf>.

¹⁸⁰ Ibid.

In investigations in Afghanistan, India, Yemen, Pakistan, South Sudan, Syria, and Nigeria, among others, Human Rights Watch found that in addition to endangering students' and teachers' safety, military use of schools also hinders children's access to education and lowers the quality of learning. It can disrupt studies, lower school enrollment, decrease school attendance, and cause damage school infrastructure.¹⁸¹

In Yemen, armed forces and armed groups attacked at least 82 schools in Sanaa, and deployed and occupied at least 54 schools for military purposes in Sanaa during the protests in 2011.¹⁸² Between March 2015, when a Saudi-led coalition began an aerial bombardment campaign of Yemen, and October 2015, 174 schools were destroyed and 611 damaged, including a school for blind children.¹⁸³ Schools have been used as barracks, bases, weapons storage facilities, observation points, firing positions, and detention centers. At schools used by armed forces and armed groups in Sanaa, Human Rights Watch documented disruptions to studies, lower school enrollment, decreased school attendance, and damage to school infrastructure.¹⁸⁴

Since 2013, international actors, including the Global Coalition to Protect Education from Attack, have led global efforts to encourage governments to adopt Guidelines for Protecting Schools and Universities from Military Use during Armed Conflict. In 2014, Norway and Argentina led efforts to develop the Safe Schools Declaration through state consultations. The declaration provides states the opportunity to express broad political support for the protection and continuation of education in armed conflict, and is the instrument for states to endorse and commit to implement the Guidelines. The Safe

Schools Declaration was endorsed by an initial group of 37 states in May 2015. As of May 2016, 53 states are signatories.¹⁸⁵

Extremist Acts Against Girls' Education

In the last few years, girls have become the main targets of extremist groups in many countries around the world.¹⁸⁶ Attacks on schools and abductions of schoolgirls or female teachers have impacted on girls' access to education and hindered attempts to improve access to quality education, build a stronger female teacher base, and narrow the gap between education for girls and boys.¹⁸⁷

In Nigeria, Boko Haram has abducted at least 2,000 women and girls from northern Nigeria since 2009, including the kidnapping of 276 schoolgirls from Chibok in April 2014, and has perpetrated numerous human rights abuses against them in captivity. Many fatal incidents damaging education, maiming and killing children, and affecting the general security in the region continue to be perpetrated on a regular basis.¹⁸⁸ Spokespersons for Boko Haram have frequently expressed an aversion to Western-style education for girls, preferring instead that the girls attend Quranic schools or marry from as young as nine.¹⁸⁹

This has led to a serious destabilization of education in several states in northeast Nigeria, further contributing to an already dire state of education. As a school official told Human Rights Watch:

Even before we were attacked, parents stopped sending children to us [school]. Fear that those things that had been happening in other areas had come to our town. Sometimes we would go to school and do nothing because no children were coming to school. The school was not closed but no students were coming. Some parents had sent their children to Niger to be refugees there.¹⁹⁰

In many cases, girls and boys are also targeted by armed groups where those groups aim to attack or destroy government institutions. In cases where governments must adopt army-led interventions to tackle such attacks, they must always plan those with critical human rights and protection concerns in mind to protect all civilians, and refrain from using schools for military purposes.¹⁹¹

¹⁹¹ Human Rights Watch, *“Those Terrible Weeks in their Camps”*.

In Afghanistan, threats and attacks on female teachers and students by the Taliban and other insurgent groups, and targeted attacks on girls' schools in particular have resulted in major disruptions and denial of girls' right to education.¹⁹² Out of the estimated 3.3 million Afghan children who do not attend school, the majority are girls.¹⁹³ Attacks have included schools being set on fire, suicide bombings and remotely detonated bombs, killings of staff, threats to staff, and abductions.¹⁹⁴

After a decrease in documented incidents after 2010, attacks increased in 2014, mainly due to attacks by armed opposition groups on schools used as polling stations for the presidential elections.¹⁹⁵

In 2015, although civilian casualties from education-related incidents decreased, overall incidents increased by over 50 per cent.¹⁹⁶ Threats and intimidation directed at teachers and educational staff in 2015 resulted in the closure of more than 222 schools across Afghanistan for varying periods of time, affecting at least 124,000 students, about half of them girls.¹⁹⁷ These attacks have made it difficult for all children in affected areas to attend school; however, they have had a disproportionately adverse effect on girls because the schools are either closed or families are unwilling to send daughters to schools in insecure areas. In some areas, this has meant that progress made since 2001 in girls' access to education has been rolled back.¹⁹⁸ In areas under Taliban control, Taliban authorities have often closed girls' schools or imposed strict restrictions on the curriculum.¹⁹⁹

Recommendations

1. All parties to an armed conflict should abide by their obligations under international humanitarian law and not attack education institutions that are not being used for military purposes. Redress should be provided where violations have occurred.
2. Governments, local organizations, and relevant international agencies should rigorously monitor attacks against education and use that information to devise effective, coordinated responses, including preventive interventions, rapid response, and both legal and non-legal accountability measures for perpetrators.
3. Governments should systematically investigate and prosecute in accordance with international standards those individuals responsible for ordering, taking part in, or bearing command responsibility for the range of violations of international human rights, humanitarian, and criminal law that constitute attacks on education.
4. All governments should endorse the Safe Schools Declaration and implement the Guidelines for Protecting Schools and Universities from Military Use during Armed Conflict.
5. Governments should adopt special measures to ensure girls can continue to go to school in highly insecure areas, including by reducing the distance to school, offering distance learning programs, and setting up protective spaces for girls and teachers.

Economic Exploitation of Children

I did well at school but when I started [mining], my performance went down because I did not have the time to study after coming back from the site, I was tired then.

—Eric, 17, who was attending the last year of junior high school and dropped out to work, Ghana, April 2015

I used to go to school when I was little, but I was working in tobacco. Two years ago, when I was 15, 16, I stopped going to school. I would just work year round. Now I started going to school... It's a lot of work. Once I started school when I was 17, I never missed school to go to work. They say in school, every day counts.

—Luciano P., 18, who worked in tobacco farms in Kentucky, United States, September 2013

In 2000, Kofi Annan, then-UN Secretary-General, reminded governments of the consequences of extreme poverty on children: “To enable families living in poverty to survive, a quarter of a billion children aged 14 and under, both in and out of school, now work, often in hazardous or unhealthy conditions. They toil in urban sweatshops; on farms or as domestic servants; selling gum or cleaning shoes in urban streets; clambering down dangerous mine shafts; and—in distressing numbers—bonded or sold into sexual services.”²⁰⁰ According to the International Labour Organization (ILO), in 2012, 168 million children between the ages of 15 and 17 were engaged in child labor, including 75 million below the age of 12. 85 million children were engaged in hazardous child labor.²⁰¹

Child labor is inextricably linked to education, particularly when children of compulsory school-going age—6 to 15 in most countries—are at work and not in school.²⁰² Children who do not have access to quality education often drop out of school and enter the workforce, particularly to supplement family income. In many cases, children also engage in labor in order to pay for their own school fees and expenses. Girls are sometimes put to work by their families to raise money to pay for their brothers to go to school, or are kept home to work raising their younger siblings.²⁰³

The ILO has found that school attendance rates of working children are only about half of those of non-working children.²⁰⁴ In many cases documented by Human Rights Watch, children dropped out of full-time education to work.²⁰⁵ Children working as domestic workers, for example, are often not allowed to go to school by their employers.²⁰⁶

In situations where children are forced to combine work and education, performance at school often suffers, particularly when children work very long hours or when they are exposed to toxic products in hazardous work, which may have an adverse effect on children’s ability to learn.²⁰⁷ Andrew, a 14-year-old boy working in underwater gold mines

²⁰⁷ Human Rights Watch, *United States—Tobacco’s Hidden Children: Hazardous Child Labor in United States Tobacco Farming*, May, 2014, <https://www.hrw.org/report/2014/05/13/tobaccos-hidden-children/hazardous-child-labor-united-states-tobacco-farming>; *Israel/Palestine—Ripe for Abuse: Palestinian Child Labor in Israeli Agricultural Settlements in the West Bank*, April 2015, <https://www.hrw.org/report/2015/04/13/ripe-abuse/palestinian-child-labor-israeli-agricultural-settlements-west-bank>; *Precious Metal, Cheap Labor*, pp. 31-33; Human Rights Watch, *Philippines—“What ... if Something Went Wrong?” Hazardous Child Labor in Small-Scale Gold Mining in the Philippines*, September 2015, <https://www.hrw.org/report/2015/09/29/what-if-something-went-wrong/hazardous-child-labor-small-scale-gold-mining#d4d30a>, p. 13.

in the Philippines, said: “In school, I was often tired so that I often doze off. My seatmates would wake me up.”²⁰⁸

In Senegal, tens of thousands of children, who often face multiple barriers to access public schools, are sent to the country’s biggest cities to attend residential Quranic schools. While in these schools, students known as *talibés* are, in many cases, barely taught and instead are forced to beg on the streets for long hours, required to bring a daily quota of money back to their teachers, or *marabouts*. These *talibés* are subjected to conditions akin to slavery, forced to endure often extreme forms of physical and psychological abuse, neglect, and exploitation by the *marabouts*, who serve as their de facto guardians. In recent years, numerous children have died as a result of abuse, including nine children who burned to death in a dilapidated Quranic school in 2013. The mistreatment and neglect pushes thousands of *talibés* to flee to a life on the street, where they live a precarious existence and are vulnerable to abuse and exploitation by street gangs and criminals.²⁰⁹

The Senegalese government has very rarely investigated and prosecuted abusive marabouts despite the widespread and open nature of the abuse, a 2005 law that prohibits forced begging and trafficking of children, and a law that criminalizes physical abuse and willful neglect of children. A draft law which would regulate the Quranic schools has stalled in parliament. The lack of accountability for abusive *marabouts* and the failure of the Senegalese state to play a regulatory role, contributes to the rising number of boys enduring this abuse and emboldens the so-called teachers using religious education as a cover for economic exploitation of the children in their charge.²¹⁰

Governments should ensure children are protected from economic exploitation and from performing any hazardous work, or work which interferes with compulsory education, or impacts on their health or development.²¹¹ An effective response to child labor requires a complex guarantee of multiple rights. To enforce children’s right to education, governments must also put equal effort into other areas, including social protection

²¹¹ CRC, art. 32 (1); The Committee on the Rights of the Child provides a non-exhaustive list of activities which may be considered economic exploitation: “Activities jeopardizing the development of the child or contrary to human values and dignity; Activities involving cruel, inhuman or degrading treatment, the sale of children or situations of servitude; Activities that are dangerous or harmful to the child’s harmonious physical, mental and spiritual development or are liable to jeopardize the future education and training of the child; Activities involving discrimination, particularly with regard to vulnerable and marginalized social groups; All activities under the minimum ages referred to in article 32, paragraph 2, of the CRC; All activities using the child for legally punishable criminal acts, such as trafficking in drugs or prohibited goods.” Office of the High Commissioner for Human Rights, “Economic Exploitation of Children,” undated, <http://www.ohchr.org/EN/HRBodies/CRC/Documents/Recommendations/exploit.pdf> (accessed April 27, 2016);

mechanisms to address the root causes of a child's need to work, and health interventions to respond to the impact of hazardous work on many children.²¹²

Recommendations

1. Governments should ratify and implement the International Labour Organization's 1973 Minimum Age Convention (No. 138) and 1999 Worst Forms of Child Labor Convention (No. 182).
2. Governments should enforce laws governing child labor and develop policies and programs related to the human rights of child workers. Allocate the resources needed to provide for a sufficient number of labor inspectors and ensure adequate enforcement powers to guarantee effective implementation of child labor laws.
3. Governments should ensure legislation on the minimum age of full time employment is not lower than the end of compulsory education.
4. Governments should ensure the availability of free education, including informal education and vocational training, for children removed from the worst forms of child labor, including children used as soldiers.
5. Governments should take steps to address the root causes of child labor, including by providing stipends conditional on school attendance to offset lost income from child labor, guaranteeing access to free primary education, educating parents about the risks of hazardous labor, and providing basic social protections to orphans and other children affected by HIV/AIDS.

Deprivation of Liberty

UNICEF has estimated that more than 1 million children around the world are behind bars.²¹³ Facilities where children are held are often little more than warehouses. Educational services are often not available to children who are held for acts of delinquency, on national security grounds, or for immigration control.

²¹² International Labour Organization, UNESCO, UNICEF, et al, "Emerging Good Practices in the Elimination of Child Labour and the Achievement of Education for All," December 2005,

Children held for acts of delinquency are too often placed in facilities that lack the staff and infrastructure necessary to provide anger management classes, life skills training, counselling, and other rehabilitative support.²¹⁴ Children who are deprived of their liberty in the name of protection or care, including children with disabilities, frequently do not receive the education and other services they need and are often subjected to neglect and abuse in orphanages or closed institutions.²¹⁵

Migrant children, both accompanied and unaccompanied, are often arbitrarily detained in inadequate detention facilities without access to any formal education and are generally not allowed to leave detention centers to attend school.²¹⁶ Moreover, the threat of

²¹⁴ Michael Garcia Bochenek (Human Rights Watch), World Report 2016 (New York: Human Rights Watch, 2016), “Children Behind Bars, The Global Overuse of Detention of Children,” <https://www.hrw.org/world-report/2016/children-behind-bars>.

²¹⁵ See Institutionalization of Children with Disabilities.

²¹⁶ Human Rights Watch, *Indonesia – Barely Surviving: Detention, Abuse, and Neglect of Migrant Children in Indonesia*, June 2013, <https://www.hrw.org/sites/default/files/reports/indonesiao613webwcover.pdf>, p. 46; Michael Garcia Bochenek

immigration detention or deportations may lead families to avoid registering their children in the official school system.²¹⁷

As a general rule, deprivation of children's liberty should be used only as a last resort and for the shortest appropriate period of time. Children should never be detained solely for the purposes of immigration control. The UN Committee on the Rights of the Child calls on states, in the exceptional cases where children are detained, to ensure that they receive care appropriate to their age, including access to education: "Such access should be granted without discrimination and in particular, separated and unaccompanied girls shall have equal access to formal and informal education, including vocational training at all levels.

In Thailand, thousands of children are arbitrarily detained in squalid immigration facilities. A 2014 Human Rights Watch investigation found that the Thai government fails to uphold asylum-seeking children's rights, risks children's health and wellbeing, and denies them their right to education. None of the children interviewed by Human Rights Watch received a formal education in detention, which stymied their social and intellectual development. Children are often held for weeks, months, and years at a time when their education is crucial to their development. Niza, a Rohingya boy held in a shelter, said "There's no school here.... Even in Burma, we went to the mosque. But here, we don't do anything all day."²¹⁸

Access to quality education should also be ensured for children with special needs, in particular children with disabilities."²¹⁹ The United Nation's revised Standard Minimum Rules for the Treatment of Prisoners, adopted in 2015, outline the compulsory nature of

(Human Rights Watch), commentary, *SBS*, "Australia's cruel detention of migrant children must stop," February 11, 2015, <https://www.hrw.org/news/2015/02/11/australias-cruel-detention-migrant-children-must-stop>.

²¹⁹ Committee on the Rights of the Child, "General Comment no.6," para. 63.

education for young prisoners, which should be integrated with the educational system of the country to ensure young prisoners can resume education in ordinary schools.²²⁰

Recommendations

1. Governments should not detain children for immigration purposes.
2. In other cases, including in cases of children accused of or found guilty of committing crimes, detention should be used only as a measure of last resort and for the shortest appropriate period of time.
3. In the exceptional cases where children are detained they should receive services and care appropriate to their age, including access to compulsory education.
4. Governments should develop a clear, time-bound plan with adequate resources to end the institutionalization of children, with extremely limited exceptions granted to emergency and temporary use of institutions; and either return children living in institutions to their birth families or place them in foster or adoptive families.

IV. Impact of Global Crises on Children's Education

Education, a basic human right, is frequently found to be interrupted, delayed or even denied during the reconstruction process and early response to emergencies.

—Vernor Muñoz, former United Nations special rapporteur on education, 2008

There are schools, but not so many students because people are afraid to send their children because of the Taliban. One school is only open one day a week. Children do not go. The Taliban doesn't allow children to go to school. If families let children go, the Taliban will kill them because in the future they may work for foreigners.

—Tarek, 16, from Helmand Province, Afghanistan, now a refugee in Greece, May 2015

Every year, natural hazards, armed conflict, and long-term humanitarian crises put millions of children and young people at risk of not getting any form of education. During such emergencies, community services and normal support mechanisms—through schools and communities—are disrupted.²²¹ Children and their families face dangerous and rapidly changing situations.

Many children are unable to claim their right to education when crises hit countries and education services are not set up accordingly.²²² The UN special rapporteur on education identified emergencies as “a source of serious violations of the right to education.”²²³

²²¹ UNICEF and the United Nations International Strategy for Disaster Risk Reduction, “Children and disasters: Building resilience through education,” December 2011, http://www.unicef.org/ceecis/Children_and_disasters_Building_resilience_through_education_final.pdf (accessed December 9, 2015).

²²³ UN General Assembly, Report of the Special Rapporteur on the right to education, Vernor Munoz, Right to education in emergency situations, A/HRC/8/10, May 20, 2008, http://www.right-to-education.org/sites/right-to-education.org/files/resource-attachments/UNSR_RTE_in_Emergencies_Situations_2008.pdf (accessed December 9, 2015).

A UN General Assembly resolution on the right to education in emergencies recommended Member States “ensure access to education in emergency situations to all affected populations, in accordance with their obligations under international law and without discrimination of any kind,” and urged governments “to provide quality education in emergency situations that is gender-sensitive, centered on learners, rights-based, protective, adaptable, inclusive, participatory and reflective of the specific living conditions of children and youth and that pays due regard, as appropriate, to their linguistic and cultural identity.”²²⁴

Armed Conflict

In wars, children are the only losers regardless of their nationalities and where they’re coming from.

—Mohammed S., Syrian father, now a refugee in Jordan, October 2015

Armed conflict challenges the realization of the right to education. Children living in countries affected by armed conflict are less likely to attend school than other children, and many experience prolonged interruptions to their studies and some abandon their efforts to learn. According to UNICEF, one in four children living in conflict zones are out of school,²²⁵ and nearly 87 million children under the age of 7 have spent their entire lives in conflict zones.²²⁶

In 2014, the Israeli incursion in Gaza led to vast destruction of the precarious education infrastructure. Half of all schools, kindergartens, and university buildings were damaged or destroyed, including the only school for children with disabilities.²²⁷ Reconstruction is hampered by restrictions on incoming construction materials and funding shortages.²²⁸ More than 90 percent of United Nations Relief and Works

Agency for Palestine Refugees in the Near East (UNRWA) schools in Gaza run double shifts, truncating education.²²⁹

Mustafa Na'em, a 15-year-old boy from Gaza, told Human Rights Watch:

All year, my daily walk to school was sad. Destruction is everywhere. Our school was partly destroyed and I am so sad about that. When we started the first semester last year, I couldn't believe my eyes. Most of the classrooms, water sinks, and other facilities had been hit by missiles. In the walls of the school, you could see the bullet marks. At first we had to use bricks to sit on instead of desks and chairs in our classrooms. In a single classroom, there were 50 students instead of 25, because my school had to take students from other schools that were completely destroyed. As a result, my school became double-shifted and overcrowded. This had a huge psychological effect on us.²³⁰

In the Central African Republic, Human Rights Watch found in 2015 that the limited education humanitarian response was not inclusive of children with disabilities. In one instance, as of April 2015, one temporary school set up in M'Poko internally displaced persons (IDP) camp, supported by UN agencies, had enrolled nearly 3,800 children, but only 14 had mild physical or sensory disabilities.

The director of the school told Human Rights Watch that the school was unable to accommodate children with sensory, psychosocial, or intellectual disabilities because teachers are not appropriately trained and facilities are inaccessible. Children with physical disabilities are often unable to attend school due to lack of adequate seating and accommodations or because of parental concerns that they will be left behind in the case of an attack.²³¹

During times of conflict and insecurity, maintaining ongoing access to education is of vital importance for children. If they remain safe and protective environments, schools can provide an important sense of normalcy that is crucial to a child's development and psychological well-being. Schools can also help provide important safety information and services.²³²

²³² Inter-Agency Standing Committee Education Cluster, "Education: An Essential Component of a Humanitarian Response," July 2013, <https://www.humanitarianresponse.info/en/operations/afghanistan/document/education-%E2%80%93-essential-component-humanitarian-response> (accessed March 1, 2016).

Natural Hazards and Health Crises

Changing precipitation patterns such as drought, and shorter but more intense rainfall, which lead to desertification and flooding, food insecurity, migration, and increased conflict, often have a direct impact on children's ability to stay in school.²³³ In 2011, drought in the Horn of Africa exacerbated a malnutrition and hunger crisis which spread out to Sahel countries in West Africa. 8.5 million children were estimated to be out of primary school across many of the countries worst affected by the prolonged impact of natural hazards.²³⁴

When water is not available in the house, the burden of collecting water outside of the household falls disproportionately on girls. The time spent collecting water may make girls late for school, or prevent them from attending at all. In some cases, girls may also be at high risk of assault, kidnapping, and forced recruitment into armed groups.²³⁵

Though urban households may be closer to water sources than rural ones, wait times or long lines at boreholes or wells mean girls in urban areas may also experience similar negative impacts on educational opportunity due to collecting water for their households.²³⁶ In Turkana region of northwestern Kenya, Human Rights Watch visited a girls' school where the girls must walk several kilometers every day to reach a dry riverbed where they dig for water and then transport 25-liter jerry cans back to the school, thus missing out on classes.²³⁷

Girls from the Kalokol Girls Primary School fetch water from a dry riverbed to carry back to their school, which does not have access to running water. Nearby Lake Turkana is too saline for human consumption. Women and girls often walk extremely long distances to dig for water in dry riverbeds, exposing them to physical danger and taking time away from their studies. As climate variability increases, women are having to walk further and dig deeper to access potable water. © 2014 Brent Stirton/Reportage by Getty Images for Human Rights Watch.

Forced Displacement

I cannot live in Syria. I cannot continue my studies. We can't walk safely on the street. We can't guarantee our lives. They attack the schools, they attack the mosques. My school was bombed. A plane attacked it at night. One month later, we moved to Quneitra. A year after we arrived, that school was destroyed too.

—Adnan, 16, from Damascus, seeking asylum in Greece, May 2015

As of June 2015, continued instability and conflict led to the displacement of around 19.5 million refugees worldwide; including over 38 million people who were internally displaced due to conflict. Half of them are children.²³⁸ Conflict in the Middle East and North Africa region alone has driven 13 million children out of school.²³⁹ The ongoing armed conflict in Syria, for example, has forced four million Syrian children out of school for over four

²³⁸ UNHCR, “Worldwide displacement hits all-time high as war and persecution increase,” June 18, 2015, <http://www.unhcr.org/558193896.html> (accessed May 23, 2016); UNHCR, “2015 likely to break records for forced displacement study,” December 18, 2015, <http://www.unhcr.org/5672c2576.html> (accessed March 1, 2016).

years.²⁴⁰ Research from the Norwegian Refugee Council shows that internally displaced and refugee children often find themselves in camps without adequate numbers of places in school, or in schools without curriculum or language relevant to those children.²⁴¹

Internally Displaced Children

Displaced children, as citizens of their countries, have a right to education and training in their new communities, but in practice face significant hurdles in continuing their education. The UN Guiding Principles on Internal Displacement recommend that “authorities concerned shall ensure that such persons, in particular displaced children, receive education which shall be free and compulsory at the primary level. Education should respect their cultural identity, language and religion.”²⁴² Moreover, adolescents and women should have access to education and training facilities, as soon as conditions permit.²⁴³

According to the UN, 2.5 million people have fled their homes in northern Nigeria due to the Boko Haram insurgency of whom 2.2 million are internally displaced. According to UNICEF, 46,453 school-age children displaced in Adamawa, Borno, Gombe, and Yobe states have been enrolled into schools.²⁴⁴ This represents less than 10 percent of the over 800,000 displaced out-of-school children, many of whom have never had access to education.

While the federal government has been supported to deliver education services to IDP children through the Safe Schools Initiative, Human Rights Watch found that key constraints include lack of competent teachers, inadequate teaching materials, difficulties in data collection due to fluid

movement of IDP population, and limited funding for education services.²⁴⁵ These factors have limited the reach and quality of delivery of education services by all actors to children in the Northeastern states most affected by the conflict.

For parents, the poor quality of teaching at the camp learning spaces evokes nostalgia for what they left behind in their violence-ravaged communities. A father of nine lamented:

There is no school here. What we have is rubbish. The children go for some hours and come back. They are not learning anything. No books. Only writing paper. It is not worth keeping my children here [in Maiduguri]. When I have [the] chance we will go back to our village.²⁴⁶

To some others, the classes in the camp present the opportunity to enjoy a right that was never available to them back home. A woman from Gwoza told Human Rights Watch:

When my children saw classes in here [camp], they were happy.... I am satisfied with the lessons. Me too, I have joined the adult class. I like Math, English, and Hausa. I only finished primary school before I married.²⁴⁷

Refugee Children

Systemic barriers in host country education systems may be particularly severe for refugee children. The UN Convention on Refugees provides that governments hosting refugees must accord the same treatment accorded to their own nationals with respect to elementary education.²⁴⁸ The principle of nondiscrimination extends to all persons of school age residing in the territory of a State party, including non-nationals, irrespective of their legal status.²⁴⁹ The CRC requires that governments adopt appropriate efforts to cater to the special needs of asylum seeking and refugee children.²⁵⁰ Moreover, governments

In Iran, access to education has frequently been described as one of the great benefits many Afghan boys and girls have acquired through living in the country. The government estimates that 280,000 Afghan primary and secondary school pupils and another 11,000 university students currently studying in Iranian educational institutions.²⁵²

The Iranian government also requires registered Afghan children to pay school fees, which authorities consider nominal but which some Afghans say are onerous.²⁵³ According to Office of the United Nations High Commissioner for Refugees (UNHCR), in 2012 tuition fees for primary, junior high, and high school were raised as a consequence of the removal of subsidies, affecting both Iranian nationals and refugees. Tuition fees increased between 42 to 50 percent during the 2012-13 school year as compared to the previous academic year.²⁵⁴ A sizeable portion of unregistered Afghan migrants in Iran are deprived of education as a result of Iranian policies. Afghans without legal status or valid refugee documents face many difficulties in obtaining education for their children, with many children going uneducated or attending underground schools as a result.²⁵⁵

In 2015, Iran reportedly allowed all Afghan children, including undocumented ones, to register for schools after Supreme Leader Ali Khamenei issued a ruling reaffirming the need for universal education.²⁵⁶ However, some reports indicate that only 10 percent of Afghan children who were left out of school were able to enroll in schools.²⁵⁷

In many cases, the matriculation fees and related costs of schooling prevent many refugee children from attending school.²⁵⁸ In Jordan, Lebanon, and Turkey, the countries hosting most Syrian refugee children, Human Rights Watch has found that schools often impose a condition for refugee children to present previous assessment or evidence of grades that

they no longer possess in order to register.²⁵⁹ School officials are often unwilling to accept refugee or foreign children in their schools, particularly where children may have limited language skills. Others are denied enrollment because schools have no room for them, or in some cases, do not have adequate inclusive education systems in place to cater to children with disabilities or those experiencing learning barriers.²⁶⁰

Beyond the immediate barriers imposed by schools or education ministries, Human Rights Watch has found that strict or xenophobic immigration policies in host countries often act as a fundamental barrier stopping many children from accessing formal or informal education programs.

In the extreme cases where governments summarily remove citizenship or formal residence status from children from refugee or migrant communities, children are forced to drop out of schools and may have limited prospects of re-enrolling in public schools. The threat of deportation may also encourage parents to keep children at home.²⁶¹

Recommendations

1. Governments should ensure education is integrated into national planning for natural hazards and disaster risk reduction, and increase special protections or financial measures for children who are at risk of dropping out.
2. Humanitarian leaders, donors and humanitarian agencies should strengthen the role and place of education in humanitarian programming, ensuring all humanitarian responses include education interventions.
3. Host states, and bilateral and multilateral donors should provide resources and technical cooperation to ensure the continuity of education in planning for emergencies and early recovery.
4. Governments and humanitarian and development agencies should ensure that internally displaced, asylum seeking and refugee children and youth are included in national education plans, and collect better data to monitor their situation.

5. Donor governments and multilateral agencies should provide greater support to governments struggling to meet the education needs of internally displaced and refugee children, particularly in remote areas.
6. Governments hosting children of foreign nationality regardless of immigration status should provide access to free and compulsory primary education, and provide opportunities for adolescents to access secondary education or vocational and skills training on an equal basis with their nationals.
7. Governments should de-link immigration-related requirements from enrollment criteria, including residence permits or school fees, which are not regularly applicable to nationals of their countries, particularly where such requirements effectively serve to isolate or discriminate against refugee and asylum-seeking children.

Acknowledgments

This report was written by Elin Martínez, a researcher in the children’s rights division at Human Rights Watch, based on research conducted by more than 50 Human Rights Watch researchers since 2005, when Human Rights Watch published “Failing Our Children: Barriers to the Right to Education.” Asha Warsame and Francesca Ciamatori, children’s rights interns, and Helen Griffiths, children’s rights associate, provided research assistance.

Annex I: What Have Governments Signed Up To?

Universally Agreed Commitments²⁶²

1948	Universal Declaration of Human Rights	<p>1. Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.</p> <p>2. Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.</p> <p>3. Parents have a prior right to choose the kind of education that shall be given to their children.</p>
------	---------------------------------------	---

Legally Binding Obligations²⁶³

1969	International Covenant on Economic Social and Cultural Rights	<p>Article 13</p> <p>1. The States Parties to the present Covenant recognize the right of everyone to education. They agree that education shall be directed to the full development of the human personality and the sense of its dignity, and shall strengthen the respect for human rights and fundamental freedoms. They further agree that education shall enable all persons to participate effectively in a free society, promote understanding, tolerance and friendship among all nations and all racial, ethnic or religious groups, and further the activities of the United Nations for the maintenance of peace.</p> <p>2. The States Parties to the present Covenant recognize that, with a view to achieving the full realization of this right:</p> <p>(a) Primary education shall be compulsory and available free to all;</p> <p>(b) Secondary education in its different forms, including technical and vocational secondary education, shall be made generally available and accessible to all by every appropriate means, and in particular by the progressive introduction of free education;</p> <p>(c) Higher education shall be made equally accessible to all, on the basis of capacity, by every appropriate means, and in particular by the progressive introduction of free education;</p> <p>(d) Fundamental education shall be encouraged or intensified as far as possible for those persons who have not received or completed the whole period of their primary education;</p> <p>(e) The development of a system of schools at all levels shall be actively pursued, an adequate fellowship system shall be established, and the material conditions of teaching staff shall be continuously improved.</p> <p>3. The States Parties to the present Covenant undertake to have respect for the liberty of parents and, when applicable, legal guardians to choose for their children schools, other than those established by the public authorities, which conform to such</p>
------	---	--

²⁶² The Universal Declaration on Human Rights is a non-binding instrument which does not require ratification. The World Conference on Human Rights in Vienna on June 25, 1993, reaffirmed the declaration's status as a common standard of achievement.

		<p>minimum educational standards as may be laid down or approved by the State and to ensure the religious and moral education of their children in conformity with their own convictions.</p> <p>4. No part of this article shall be construed so as to interfere with the liberty of individuals and bodies to establish and direct educational institutions, subject always to the observance of the principles set forth in paragraph 1 of this article and to the requirement that the education given in such institutions shall conform to such minimum standards as may be laid down by the State.</p> <p>Article 14</p> <p>Each State Party to the present Covenant which, at the time of becoming a Party, has not been able to secure in its metropolitan territory or other territories under its jurisdiction compulsory primary education, free of charge, undertakes, within two years, to work out and adopt a detailed plan of action for the progressive implementation, within a reasonable number of years, to be fixed in the plan, of the principle of compulsory education free of charge for all.</p>
1979	Convention on the Elimination of Discrimination Against Women	<p>Article 10</p> <p>States Parties shall take all appropriate measures to eliminate discrimination against women in order to ensure to them equal rights with men in the field of education and in particular to ensure, on a basis of equality of men and women:</p> <p>(a) The same conditions for career and vocational guidance, for access to studies and for the achievement of diplomas in educational establishments of all categories in rural as well as in urban areas; this equality shall be ensured in pre-school, general, technical, professional and higher technical education, as well as in all types of vocational training;</p> <p>(b) Access to the same curricula, the same examinations, teaching staff with qualifications of the same standard and school premises and equipment of the same quality;</p> <p>(c) The elimination of any stereotyped concept of the roles of men and women at all levels and in all forms of education by encouraging coeducation and other types of education which will help to achieve this aim and, in particular, by the revision of textbooks and school programmes and the adaptation of teaching methods;</p> <p>(d) The same opportunities to benefit from scholarships and other study grants;</p> <p>(e) The same opportunities for access to programmes of continuing education, including adult and functional literacy programmes, particularly those aimed at reducing, at the earliest possible time, any gap in education existing between men and women;</p> <p>(f) The reduction of female student drop-out rates and the organization of programmes for girls and women who have left school prematurely;</p> <p>(g) The same Opportunities to participate actively in sports and physical education;</p> <p>(h) Access to specific educational information to help to ensure the health and well-being of families, including information and advice on family planning.</p>
1989	Convention on the Rights of the Child	<p>Article 28</p> <p>1. States Parties recognize the right of the child to education, and with a view to achieving this right progressively and on the basis of equal opportunity, they shall, in particular:</p> <p>(a) Make primary education compulsory and available free to all;</p> <p>(b) Encourage the development of different forms of secondary education, including general and vocational education, make them available and accessible to every child, and take appropriate measures such as the introduction of free education and offering financial assistance in case of need;</p> <p>(c) Make higher education accessible to all on the basis of capacity by every appropriate means;</p> <p>(d) Make educational and vocational information and guidance available and accessible to all children;</p>

		<p>(e) Take measures to encourage regular attendance at schools and the reduction of drop-out rates.</p> <p>2. States Parties shall take all appropriate measures to ensure that school discipline is administered in a manner consistent with the child's human dignity and in conformity with the present Convention.</p> <p>3. States Parties shall promote and encourage international cooperation in matters relating to education, in particular with a view to contributing to the elimination of ignorance and illiteracy throughout the world and facilitating access to scientific and technical knowledge and modern teaching methods. In this regard, particular account shall be taken of the needs of developing countries.</p> <p>Article 29</p> <p>1. States Parties agree that the education of the child shall be directed to:</p> <p>(a) The development of the child's personality, talents and mental and physical abilities to their fullest potential;</p> <p>(b) The development of respect for human rights and fundamental freedoms, and for the principles enshrined in the Charter of the United Nations;</p> <p>(c) The development of respect for the child's parents, his or her own cultural identity, language and values, for the national values of the country in which the child is living, the country from which he or she may originate, and for civilizations different from his or her own;</p> <p>(d) The preparation of the child for responsible life in a free society, in the spirit of understanding, peace, tolerance, equality of sexes, and friendship among all peoples, ethnic, national and religious groups and persons of indigenous origin;</p> <p>(e) The development of respect for the natural environment.</p> <p>2. No part of the present article or article 28 shall be construed so as to interfere with the liberty of individuals and bodies to establish and direct educational institutions, subject always to the observance of the principle set forth in paragraph 1 of the present article and to the requirements that the education given in such institutions shall conform to such minimum standards as may be laid down by the State.</p>
1990	Convention on the Protection of the Rights of All Migrant Workers and Members of their Families	<p>Article 30</p> <p>Each child of a migrant worker shall have the basic right of access to education on the basis of equality of treatment with nationals of the State concerned. Access to public pre-school educational institutions or schools shall not be refused or limited by reason of the irregular situation with respect to stay or employment of either parent or by reason of the irregularity of the child's stay in the State of employment.</p> <p>Article 43</p> <p>1. Migrant workers shall enjoy equality of treatment with nationals of the State of employment in relation to:</p> <p>(a) Access to educational institutions and services subject to the admission requirements and other regulations of the institutions and services concerned;</p> <p>(b) Access to vocational guidance and placement services;</p> <p>(c) Access to vocational training and retraining facilities and institutions;</p>
2008	Convention on the Rights of Persons with Disabilities	<p>Article 24 - Education</p> <p>1. States Parties recognize the right of persons with disabilities to education. With a view to realizing this right without discrimination and on the basis of equal opportunity, States Parties shall ensure an inclusive education system at all levels and life long learning directed to:</p> <p>(a) The full development of human potential and sense of dignity and self-worth, and the strengthening of respect for human rights, fundamental freedoms and human diversity;</p>

		<p>(b) The development by persons with disabilities of their personality, talents and creativity, as well as their mental and physical abilities, to their fullest potential;</p> <p>(c) Enabling persons with disabilities to participate effectively in a free society.</p> <p>2. In realizing this right, States Parties shall ensure that:</p> <p>(a) Persons with disabilities are not excluded from the general education system on the basis of disability, and that children with disabilities are not excluded from free and compulsory primary education, or from secondary education, on the basis of disability;</p> <p>(b) Persons with disabilities can access an inclusive, quality and free primary education and secondary education on an equal basis with others in the communities in which they live;</p> <p>(c) Reasonable accommodation of the individual's requirements is provided;</p> <p>(d) Persons with disabilities receive the support required, within the general education system, to facilitate their effective education;</p> <p>(e) Effective individualized support measures are provided in environments that maximize academic and social development, consistent with the goal of full inclusion.</p> <p>3. States Parties shall enable persons with disabilities to learn life and social development skills to facilitate their full and equal participation in education and as members of the community. To this end, States Parties shall take appropriate measures, including:</p> <p>(a) Facilitating the learning of Braille, alternative script, augmentative and alternative modes, means and formats of communication and orientation and mobility skills, and facilitating peer support and mentoring;</p> <p>(b) Facilitating the learning of sign language and the promotion of the linguistic identity of the deaf community;</p> <p>(c) Ensuring that the education of persons, and in particular children, who are blind, deaf or deafblind, is delivered in the most appropriate languages and modes and means of communication for the individual, and in environments which maximize academic and social development.</p> <p>4. In order to help ensure the realization of this right, States Parties shall take appropriate measures to employ teachers, including teachers with disabilities, who are qualified in sign language and/or Braille, and to train professionals and staff who work at all levels of education. Such training shall incorporate disability awareness and the use of appropriate augmentative and alternative modes, means and formats of communication, educational techniques and materials to support persons with disabilities.</p> <p>5. States Parties shall ensure that persons with disabilities are able to access general tertiary education, vocational training, adult education and lifelong learning without discrimination and on an equal basis with others. To this end, States Parties shall ensure that reasonable accommodation is provided to persons with disabilities.</p>

THE EDUCATION DEFICIT

Failures to Protect and Fulfill the Right to Education in Global Development Agendas

More than 15 years after the adoption of ambitious development goals to ensure all children complete primary school, over 120 million children between 6-15 years old are not attending school. The newly adopted Sustainable Development Goals aim to reach “free, equitable and quality primary and secondary education” by 2030. Yet, without addressing human rights abuses experienced by millions of children on a daily basis, this situation could worsen in many countries.

Based on nearly two decades of research in over 40 countries, *The Education Deficit* illustrates how the high cost of education, violence, and discrimination, amongst many other factors, keep many children and adolescents out of school. Among those suffering discrimination in education are girls, children with disabilities, and children from ethnic, religious or language minorities. Millions of children living in humanitarian crises and long-term conflicts are unable to claim their right to education when education services are not set up in these contexts, or when schools are attacked.

The report warns that countries will not achieve education for all without more focus on rights violations that prevent access to school and that affect children in school.

In 2016, as key governments meet to determine action and funding on the right to education, Human Rights Watch calls upon all governments to fulfill their international human rights obligations, to put an end to discriminatory and harmful practices affecting children’s education, and to ensure that international development cooperation emphasizes human rights.
